Title of the Academic Program:

Bachelor of Science in Information and Communication Engineering

Name of the University:

University of Rajshahi

Vision of the University:

To pursue enlightenment and creativity for producing world-class human resources to cater for the needs of changing time.

Mission of the University:

M1-RU: To ensure a world-class curriculum with talented academicians and conducive academic and research environment for generation and dissemination of knowledge

M2-RU: To maintain international standards in education with focus on both knowledge and skills, and humanitarian and ethical values to meet the needs of the society and state.

M3-RU: To develop strategic partnerships with leading national and international universities, and organizations for academic as well as research collaborations

Name of the Program Offering Entity:

Department of Information and Communication Engineering

Vision of the Program Offering Entity

Establishment of quality academic culture in the department for the attainment of intended skills, knowledge and attitude in the field of Information and Communication Engineering (ICE) so that the graduates can cater to the current and future needs of Information and Communication Technology (ICT) oriented industry and academia leading to the socio-economic development of Bangladesh.

Mission of the Program Offering Entity

In order to accomplish the vision, the department will

M1-ICE: Establish a unique learning environment to enable the students to face the challenges in the field of Information and Communication Engineering.

M2-ICE: Promote the establishment of center of excellence in appropriate technological areas to enhance the spirit of innovation and creativity among faculty members and students.

M3-ICE: Provide ethical and value-based education by promoting activities addressing the socio-economic needs.

M4-ICE: Enable students to develop skills to solve complex technological problems and provide a framework for promoting collaborative and multidisciplinary activities.

Mapping between Departmental Mission (ICE) and University Mission (RU)

Departmental Mission	Mapped University Mission(s)	Justification / Alignment
M1-ICE: Establish a unique learning environment to enable the students to face the challenges in the field of Information and Communication Engineering.	M1-RU, M2-RU	A world-class curriculum and conducive academic environment (M1-RU) directly support a unique learning ecosystem, while international standards with a focus on skills (M2-RU) help students meet technological challenges.
M2-ICE: Promote the establishment of center of excellence in appropriate technological areas to enhance the spirit of innovation and creativity among faculty members and students.	M1-RU, M3-RU	Centers of excellence contribute to advanced research and knowledge generation (M1-RU) and are strengthened through strategic academic and research collaborations (M3-RU).
M3-ICE: Provide ethical and value-based education by promoting activities addressing the socio-economic needs.	M2-RU	Emphasis on humanitarian and ethical values and societal needs directly aligns with M2-RU.

M4-ICE: Enable students to develop skills to solve complex technological problems and provide a framework for promoting collaborative and multidisciplinary activities.	M1-RU, M3-RU	Skill development for complex problem-solving aligns with knowledge dissemination and academic excellence (M1-RU), while collaborative and multidisciplinary activities are supported through national and international partnerships (M3-RU).
--	---------------------	--

Objectives of the Program Offering Entity

1. Produce professional Information and Communication engineers.
2. Establish a center of excellence in research and innovation.
3. Contribute the community for achieving sustainable development goals (SDGs) of Bangladesh through research and innovation.
4. Facilitate industrial collaboration to contribute in industrial revolution (IR).

Name of the Degree

Bachelor of Science in Information and Communication Engineering abbreviated as B. Sc. Engg. (ICE)

Description of the Program:

The B. Sc. in Information and Communication Engineering program is designed to equip students with a comprehensive understanding of the theories, principles, and practical applications in the dynamic field of information and communication technologies. This program integrates a broad range of subjects, encompassing both theoretical knowledge and hands-on skills, to prepare students for a successful career in the rapidly evolving world of technology.

Program Educational Objectives:

The Program Educational Objective (PEO) of the Department of Information and Communication Engineering (ICE) cater to the requirements of the stakeholders such as students, employers, alumni, faculty etc. The program educational objectives are as follows:

- PEO-1:** Provide students with sound foundation in mathematical, scientific and engineering fundamentals necessary to formulate, solve and analyze the engineering problems and develop the solutions for real world ICT problems.
- PEO-2:** Impart analytic and critical thinking skills to develop initiative and innovative ideas for research and development (R&D), industry and societal requirements.

PEO-3: Inculcate professional and ethical attitude in students by providing effective communication skills, leadership skills and team work to challenge the contemporary issues to broader social context.

PEO-4: Provide an academic environment that gives adequate opportunity to the students to cultivate lifelong skills and an idea of business transformation needed for a successful professional career.

Mapping between Mission of the University of Rajshahi (RU) and Program Educational Objectives (B.Sc. in Information and Communication Engineering)

Mission of RU	Program Educational Objectives

M2-RU		√	√	
M3-RU		√	√	

Program Outcomes (PO):

After completion of the B.Sc. Engineering degree in Information and Communication Engineering (ICE) graduates will be able to:

Program Outcomes (PO)

PO-1: Engineering Knowledge	Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization as specified in WK1 to WK4 respectively to develop solutions of complex Information and Communication engineering problems.
PO-2: Problem Analysis	Identify, formulate, research and analyze complex Information and Communication engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences with holistic considerations for sustainable development (WK1 to WK4).
PO-3: Design/Development of Solutions:	Design creative solutions for complex Information and Communication Engineering problems and design systems, components or processes to meet identified needs with appropriate consideration for public health and safety, whole-life cost, net zero carbon as well as resource, cultural, societal, and environmental considerations as required (WK5).

PO-4: Investigation	Conduct investigations of complex Information and Communication Engineering problems using research methods including research-based knowledge, design of experiments, analysis and interpretation of data, and synthesis of information to provide valid conclusions (WK8).
PO-5: Modern Tool Uses	Create, select and apply and recognize limitations of appropriate techniques, resources, and modern engineering and IT tools, including prediction and modeling, to complex Information and Communication Engineering problems (WK2, WK6).
PO-6: Sustainability Impacts	When solving complex Information and Communication engineering problems, analyze and evaluate sustainable development impacts to: society, the economy, sustainability, health and safety, legal frameworks, and the environment (WK1, WK5, and WK7).
PO-7: Ethics and Diversity	Apply ethical principles and commit to professional ethics and norms of engineering practice and adhere to relevant national and international laws. Demonstrate an understanding of the need for diversity and inclusion (WK9).
PO-8: Individual Work and Teamwork	Function effectively as an individual, and as a member or leader in diverse and inclusive teams and in multi-disciplinary, face-to-face, remote and distributed settings (WK9).
PO-9: Communication	Communicate effectively and inclusively on complex Information and Communication Engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, taking into account cultural, language, and learning differences.
PO-10: Project Management and Finance	Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team and to manage projects and in multidisciplinary environments.
PO-11: Learning and Adaptability	Recognize the need for, and have the preparation and ability for i) independent and life-long learning, ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change (WK8).
PO-12: Business Transformation	Demonstrate knowledge and understanding of the competences necessary to transform opportunities and ideas into a new business.

Mapping PEO Vs PO

Knowledge and Attitude Profile Attribute:

By the time of graduation, the students should have achieved the graduate attributes (also known as **Program Outcomes, PO as described in the Table-1**), as well as, the attributes of the **Knowledge and Attitude Profile(WK1-WK9)**, the **ranges of Complex Problem Solving (WP1 – WP7) and Complex Engineering Activities (EA1 – EA5)** as presented in the following tables:

Knowledge and attitude Profile Attribute

WK1	A systematic, theory-based understanding of the natural sciences applicable to the discipline and awareness of relevant social sciences
WK2	Conceptually based mathematics, numerical analysis, data analysis, statistics and the formal aspects of computer and information science to support detailed analysis and modeling applicable to the discipline
WK3	A systematic, theory-based formulation of engineering fundamentals required in the engineering discipline
WK4	Engineering specialist knowledge that provides theoretical frameworks and bodies of knowledge for the accepted practice areas in the engineering discipline; much is at the forefront of the discipline
WK5	Knowledge, including efficient resource use, environmental impacts, whole-life cost, re-use of resources, net zero carbon, and similar concepts, that supports engineering design and operations in a practice area
WK6	Knowledge of engineering practice (technology) in the practice areas in the engineering discipline
WK7	Knowledge of the role of engineering in society and identified issues in engineering practice in the discipline, such as professional responsibility of an engineer to public safety and sustainable development
WK8	Engagement with selected knowledge in the current research literature of the discipline, awareness of the power of critical thinking and creative approaches to evaluate emerging issues
WK9	Ethics, inclusive behavior and conduct. Knowledge of professional ethics, responsibilities, and norms of engineering practice. Awareness of the need

	for diversity by reason of ethnicity, gender, age, physical ability etc. with mutual understanding and respect, and of inclusive attitudes
--	--

Range of Complex Engineering Problem-Solving Attributes

Attributes	
Depth of knowledge required	WP1: Cannot be resolved without in-depth engineering knowledge at the level of one or more of WK3, WK4, WK5, WK6 or WK8 which allows a fundamentals-based, first principles analytical approach
Range of conflicting requirements	WP2: Involve wide-ranging or conflicting technical, non-technical issues (such as ethical, sustainability, legal, political, economic, societal) and consideration of future requirements
Depth of analysis required	WP3: Have no obvious solution and require abstract thinking, creativity and originality in analysis to formulate suitable models
Familiarity of issues	WP4: Involve infrequently encountered issues or novel problems
Extent of applicable codes	WP5: Address problems not encompassed by standards and codes of practice for professional engineering
Extent of stakeholder involvement and conflicting requirements	WP6: Involve collaboration across engineering disciplines, other fields, and/or diverse groups of stakeholders with widely varying needs
Interdependence	WP7: Address high level problems including many components or sub-problems that may require a systems approach

Table-4: Range of Complex Engineering Activities

Attribute	Complex activities mean (engineering) activities or projects that have some or all of the following characteristics:
Range of resources	EA1: Involve the use of diverse resources including people, data and information, natural, financial and physical resources and appropriate technologies including analytical and/or design software
Level of interactions	EA2: Require optimal resolution of interactions between wide-ranging and/or conflicting technical, non-technical, and engineering issues
Innovation	EA3: Involve creative use of engineering principles, innovative solutions for a conscious purpose, and research-based knowledge
Consequences to society and the environment	EA4: Have significant consequences in a range of contexts, characterized by difficulty of prediction and mitigation
Familiarity	EA5: Can extend beyond previous experiences by applying principles-based approaches

Mapping Table: PO, WK, WP, and EA

Program Outcome (PO)	Knowledge Profile (WK)	Complex Problem Solving (WP)	Complex Engineering Activities (EA)
PO-1: Engineering Knowledge	WK1 to WK4	WP1 to WP7*	-
PO-2: Problem Analysis	WK1 to WK4	WP1 to WP7*	-
PO-3: Design/Development of Solutions:	WK5	WP1 to WP7*	-
PO-4: Investigation	WK8	WP1 to WP7*	-
PO-5: Modern Tool Uses	WK2, WK6	WP1 to WP7*	-
PO-6: Sustainability Impacts	WK1, WK5, WK7	WP1 to WP7*	-
PO-7: Ethics and Diversity	WK9	-	-
PO-8: Individual Work and Teamwork	WK9	-	-
PO-9: Communication	-	WP1 to WP7*	EA1 to EA5**
PO-10: Project Management and Finance	-	-	-
PO-11: Learning and Adaptability	WK8	-	-
PO-12: Business Transformation	-	-	-

*Mapping is based on the PO's requirement to solve "complex engineering problems," which are defined by attributes WP1–WP7.

**Mapping is based on the PO's requirement to perform "complex engineering activities," which are defined by attributes EA1–EA5.

where, n is the number of courses offered during the semester, C_i is the number of credits allotted to a particular course and G_i is the grade point earned for that course.

- 1.3. A **Yearly Grade Point Average (YGPA)** shall be calculated for each academic year as follows:

$$YGPA = \frac{\sum_{j=1}^2 C_j G_j}{\sum_{j=1}^n C_j}$$

where, 2 signifies that there are two (2) semesters in a particular year, C_j is the number of credits allotted to a semester and G_j is the GPA earned for that semester.

- 1.4. The **Cumulative Grade Point Average (CGPA)** gives the cumulative performance of the students from the 1st year up to the end of the year to which it refers, and will be calculated as follows:

$$CGPA = \frac{\sum_{k=1}^m G_k C_k}{\sum_{k=1}^m C_k}$$

where, m is the total number of years being considered, C_k is the total number of credits registered during a year and G_k is the YGPA of that particular year.

- 1.5. A Cumulative Grade Point Average (CGPA) shall be calculated at the end of each academic year and to be communicated to the students along with the YGPAs. The individual grades of courses obtained by them for the semesters of the academic years will, however, be communicated at the end of individual semester by the Chairman of the Examination Committee.
- 1.6. YGPA should be three digits after the period. A fourth digit after the period is not allowed at all. For instance, YGPA=3.4999 should be 3.499. However, the CGPA will be two digits after the period. In this case, if the third digit after the period is ≥ 5 then the second digit after the period will be plus 1. For instance, CGPA=3.485 will be 3.49 whereas CGPA=3.354 will be 3.35.

- 1.7. **Earned Credit:** The courses in which a student obtains minimum 'D' or higher grade will be counted as credits earned by the student. Any course in which a student obtains 'F' grade will not be counted towards his/her earned credit.

2. Attendance

- 2.1 In order to be eligible for appearing, as a regular candidate, at the semester final examinations, a student shall be required to have **attended at least 75% of**

the total number of periods of lectures/tutorials/laboratory classes held during the semester in every **course** as defined in the curricula. The laboratory courses mean all laboratory/project/fieldwork/in-plant training and any other similar courses.

2.2 A student whose attendance **falls short of 75% but not a below 60%** in any **course** as mentioned above may be allowed to appear at the final examinations as **non-collegiate** student and **he/she shall not be eligible for the award of any scholarship or stipend**. A student, appearing at the examination under the benefit of this provision shall have to pay, in addition to the regular fees, the requisite fine prescribed by the syndicate for the purpose.

2.3 Students having **less than 60% attendance** in lecture/tutorial/ laboratory of **any course will not be allowed to appear** at the final examinations of the semester.

3. **Conducting Examinations and Rules for Promotion**

3.1 **Annual Promotion/YGPA and Credit Requirement**

- a. The Minimum Year Grade Point Average (YGPA) will be: 2.00, 2.25, 2.50 and 2.50 respectively for First Year, Second Year, and so on.

Class Year	Minimum YGPA
First Year	2.00
Second Year	2.25
Third Year	2.50
Fourth Year	2.50

- b. A maximum of 9 credits can be relaxed in one year. If a student fails to meet the annual YGPA and Credit requirement (s)he will be re-admitted in the same year in the next academic year. If a student loses more than 9 credits in first semester he/she will be readmitted in the same semester in the next academic year.
- c. A readmitted student may seek exemption (in any semester) from retaking the courses in which (s)he has already obtained GP 2.75 [LG B⁻ (B minus)] or above. In this case, the previously obtained grades in these courses shall be retained when calculating the YGPA.

3.2 **Course Improvements**

- i. A student fulfilling annual YGPA and credit requirements will be allowed to improve theoretical course grades or clear F-grades for a maximum of 9 credits altogether. The student will be allowed to appear once in the theoretical course improvement examination in the immediate next similar semesters. To clear F-grades in theoretical/practical/ sessional/ studio/viva-voce etc. courses, the candidate will be allowed to appear in the examination for maximum two times in immediate consecutive semesters. For fourth year, this opportunity to clear F-grades will be allowed only once in the next immediate similar semester.

- ii. All improvements and F-clearance must be completed within 6 years of admission.
- iii. Theoretical course improvement will only be allowed if the earned grade is less than letter grade B minus (B⁻, <2.75).
- iv. In practical/ sessional/ studio/viva-voce etc. courses a student will be allowed only to clear F grades.
- v. A readmitted student unable able to attend classes or class test will carry his/her previous marks in continuous assessment (CA).
- vi. In case of a student's failure to improve course grade in the course improvement examination, the previous grade will remain valid.
- vii. Course improvement or F-clearance after award of degree will be treated as 'Result Improvement'.

3.3 Award of Degree

In order to obtain the Bachelor/Bachelor (Honors) Degree a student must fulfill the following conditions:

- i. Bachelor/Bachelor (Honors) Degree program must be completed within minimum period of 4 and maximum of 6 academic years from the date of admission for all Faculties/Institutes. No student will be allowed to be readmitted more than two consecutive times in the same year.
- ii. The minimum CGPA for awarding Bachelor/Bachelor (Honors) Degree is 2.50 out of 4.0.
- iii. The range of Total Credit Point (minimum Credit Point) required for awarding Bachelor/Bachelor (Honors) Degree is 138-160 with exemption of maximum 8 credits.
- iv. Fourth year candidates eligible for Course Improvement (minimum YGPA 2.50 and maximum credit loss of 9 credits), but not eligible for Award of Degree will have a result status 'Incomplete'.

3.4 Merit Position: The YGPA obtained by a student in first year, second year and third year and CGPA obtained in the fourth year will be considered for determining the **merit position for the award of scholarships, stipends etc.**

3.5 Class Test / Class Assessment

- 3.5.1** For theoretical courses of less than or equal to 2 credits there shall be at least **three class tests** and **at least four class tests** for course greater than 2 credits in a semester.
- 3.5.2** The class test/class assessment will be evaluated by the class teacher and marks with scripts will be submitted to the examination committee for preservation.
- 3.5.3** Previous class test marks will remain valid for the reported/course improvement/readmitted student if he/she unable to appear at class test.

3.6 Duration of Examination: Duration of Theoretical **examination of different courses** at the end of semester shall be as follows:

Courses less than or equal to 2 Credits : 2 Hours

Courses greater than 2 credits but less than or equal to 4 Credits : 3 Hours

3.7 Degree with Honours: Candidates for Bachelor degree in engineering will be awarded the degree with Honours if their earned credit is 160 and CGPA is 3.75 or higher.

3.8 Dean's List: As a recognition of excellent performance, the names of students obtaining a CGPA of 3.75 or above in the final examination may be published in the Dean's List in the faculty. Students who have received an 'F' grade in any course during will not be considered for Dean's List.

4 Distribution of Marks

Distribution of the marks as per following table

4.1	Theoretical Courses:		
	Continuous Assessment (CA)	Class Attendance/Participation	10%
		Quizzes/Class Test	20%
	Semester Final Examination		70%
	Total		100%
4.2	Laboratory		
	Class Attendance/Participation		10%
	Quizzes, Viva-Voce and Continuous Assessment		30%
	Practical Examination		60%
	Total		100%
4.3	Project Work/Field Work/Professional Training		
	Internal Examiner/Supervisor		30%
	External Examiner (Any teacher from the panel of examiners)		30%
	Presentation and Oral Examination		40%
	Total		100%
4.4	Basis for awarding marks for class participation and attendance:		
	Attendance	Marks (%)	
	90% and above	100	
	85% to less than 90%	90	
	80% to less than 85%	80	
	75% to less than 80%	70	
	70% to less than 75%	60	
	65% to less than 70%	50	
	60% to less than 65%	40	
	less than 60%	0	

5 Duration of Course and Course Structure

Teaching of the courses is reckoned in terms of credits under the following guidelines

Nature of course	Contact hour (for 1 credit)
Theoretical Lecture	: 1 hour/week
Laboratory/Project	: 2 hours/week

6 Academic Calendar

6.1 The academic year shall be divided into two semesters each having duration of **14 teaching weeks**.

6.2 There shall be final examinations at the end of each semester conducted by the respective Examination Committee of the Departments.

An academic schedule for the academic year shall be announced for general notification before the start of the academic year, on the approval of the Academic Committee. The schedule may be prepared according to the following guidelines:

First Semester (24 weeks)	Number of weeks
Teaching	14
Preparatory Leave	2
Examination Period	2 - 4
Result Publication	2 - 4
Inter Semester Recess	1
Second Semester (24 weeks)	
Teaching	14
Preparatory Leave	2
Examination Period	2 - 4
Result Publication	2 - 4
Inter Year Recess	1

7. Summary of marks and credits distribution for B.Sc. Engg. (ICE)

Course Type	Marks	Percentage of Total Marks	Credits
Humanities	250	6.25%	10
English	50	1.25%	2
Economics	50	1.25%	2
Accounting and Management	50	1.25%	2
Law	50	1.25%	2
Innovation and Entrepreneurship for IT Business	50	1.25%	2
Basic Sciences with Lab	662.5	16.5625%	26.5
Mathematics	300	7.5%	12
Statistics	100	2.5%	4
Physics	187.5	4.6875%	7.5

Chemistry	75	1.875%	3
Basic and Major Engineering	3137.5	78.4375%	125.5
(i) Basic Engineering with Lab	(187.5)	(4.6875%)	(7.5)
Computer Science and Engineering	112.5	2.8125%	4.5
Electrical and Electronic Engineering	75	1.875%	3
(ii) Major Engineering	(2900)	(72.50%)	(116)
(a) Theoretical	1875	46.875%	75
(b) Laboratory, Industrial Training and Project	900	22.50%	36
(c) Board viva-voce	125	3.125%	5
Total	4000	100	160

8. Summary of number of courses for the degree of Bachelor of Science (B.Sc.) in Engineering

Year - Semester	Theory		Lab and Others		Total Credits
	No. of Courses	Credit	No. of Courses	Credits	
1st - First	6	17	2	3	20
1st - Second	6	15	3	4	19
2nd - First	6	16	2	3	19
2nd - Second	5	15	4	5	20
3rd - First	5	15	4	6	21
3rd - Second	5	14	4	5.5	19.5
4th - First	4	12	6	8	20
4th - Second	4	12	5	9.5	21.5
Total	41	116	30	44	160

Course Outline

First Year, First Semester

ICE1111: Electronics-I

75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is important because modern communication devices, embedded systems, IoT sensors, and consumer electronics rely heavily on semiconductor devices and analog circuits. It teaches students how to analyze and design circuits using diodes, BJTs, FETs, amplifiers, and biasing methods. The course addresses practical problems such as signal amplification, voltage regulation, power management, and circuit troubleshooting. It is especially relevant today because industries need engineers who can develop compact, energy-efficient, and reliable electronic systems for 5G, IoT, automation, and smart devices.

Course Objective:

This objective of this course is to develop foundational knowledge and analytical competence in electronic circuits and semiconductor devices for the analysis and design of basic diode, BJT, and FET-based electronic systems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

COs	CO Statement	Corresponding PO	Domain / Level of Learning Taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain various laws and theorems of electronic circuits to solve the circuit problems.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Explain the fundamentals of semiconductor physics and diode applications.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Analyze Bipolar Junction Transistor (BJT) operation, biasing, and amplifier performance.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

CO-4	Analyze FET and ((JFET and MOSFET)) characteristics, biasing, and amplifier configurations.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
-------------	---	-------------	-----------------------------	---	---

Course Contents

Circuit Analysis & Network Theorems: Kirchhoff's laws, Methods of analysis, Branch current, Mesh and nodal analysis, T - Π and Π - T conversion, Superposition theorem, Thevenin's theorem, Norton's theorem, Maximum power transfer theorem.

Semiconductor Physics & PN Junction Diode: Introduction to semiconductor materials, energy bands, intrinsic and extrinsic semiconductors (N-type and P-type), PN junction diodes and their I-V characteristics.

Diode Applications: Load line and Q-point analysis, Rectifiers (Half-wave, Full-wave, Bridge), Zener diode as voltage regulator, Clipper, Clamper, Voltage multiplier circuit.

Filters: Introduction, Importance in electronic circuits, Filter Characteristics, Classification of filters, Passive filters (Capacitor Filter, RC Filter, LC Filter, π -Filter), Active Filters (First & Second order: Low-Pass, High-Pass, Band-Pass), Band-stop (notch) filter, Constant-K type filter.

Bipolar Junction Transistor (BJT) & Biasing: BJT construction and operation principles, operation modes (active, saturation, cutoff), BJT Configurations (CE, CB, CC), DC Load line analysis, Operating point, Stabilization, Stability factor, Biasing techniques (Fixed bias, Voltage divider) and Thermal Runaway.

BJT Amplifiers & Hybrid (h)-Parameter Model: Amplification, Classification, Operation, Graphical analysis of CE, CB and CC amplifier, Definition and derivation of hybrid parameters for a two-port network, h-parameter equivalent circuits, analysis of CE, CB and CC amplifiers using hybrid or h-parameters.

Field-Effect Transistors (FETs): JFET, MOSFET (depletion type and enhancement type), construction, working principle, FET characteristics (drain and transfer characteristics), Ohmic and pinch-off voltage.

FET Biasing & Amplifiers: Introduction, FET biasing methods (Fixed and Voltage Divider), Small-signal model, analysis of Common source, Common drain and Common gate amplifier Comparison between BJT and FET.

Text Books:

1. Sedra, A. S., & Smith, K. C. : Microelectronic Circuits
2. Boylestad, R. L., & Nashelsky, L. : Electronic Devices and Circuit Theory
3. Gupta & Kumar : Handbook of Electronics

Reference Books:

1. Razavi, B. : Fundamentals of Microelectronics
2. V.K. Mehta and Rohit Mehta : Principles of Electronics

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

ICE1112: Electronics-I Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This lab provides hands-on training with oscilloscopes, multimeters, and breadboards to construct and analyze diode, BJT, and FET circuits, solving the industry's persistent problem of bridging theoretical knowledge (network theorems, filters) with functional hardware. With the rapid miniaturization of electronics and demand for energy-efficient designs, graduates must be able to experimentally verify circuit behavior and troubleshoot faults. Taught alongside the theory course, this lab ensures students gain the practical competence needed for careers in consumer electronics, automation, and embedded systems.

Course Objective:

This lab provides hands-on experience with modern electronic tools and components including multimeters, power supplies, signal generators, oscilloscopes, resistors, capacitors, inductors, diodes, and transistors. The main objective of this lab is to apply network theorems in practical circuit analysis and to experimentally study the characteristics of BJTs and FETs.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

COs	CO Statement	Corresponding PO	Domain / Level of Learning Taxonomy	Delivery methods and activities	Assessment tools
CO-1	Use modern electronic tools, components, and equipment to construct circuits on a breadboard.	PO-5	Psychomotor or Level 1 (Imitate)	☐ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☒ Lab Quiz ☒ Viva
CO-2	Construct and analyze DC circuits or networks using different network theorems.	PO-4	Psychomotor or Level 2 (Manipulate)	☐ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☒ Lab Quiz ☒ Viva
CO-3	Analyze the characteristics of filter circuits, diodes, BJTs, and FETs.	PO-4	Psychomotor or Level 2 (Manipulate)	☐ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☒ Lab Quiz ☒ Viva

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in the final exam, lab tests, assignments, class participation, quizzes and viva voce. Final numeric reward will be the compilation of:

- **Class participation** (10%)
- **Continuous assessment (lab test, assignments, quiz, viva-voce)** (30%)
- **Final exam** (60%)

COs	Assessment Tools (Total 100%)			
	30%		10%	60%

CSE1191: Structured Programming
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course introduces fundamental programming concepts using structured programming language such as C programming language, emphasizing structured problem-solving, efficient coding, and memory management. It covers core topics such as control structures, arrays, pointers, functions, structures and unions, and file handling. By learning C, students gain a strong foundation for advanced programming and system-level development, enhancing analytical thinking and preparing them for careers in computer science and software engineering.

Course Objective

The objective of this course is to develop programming skills using the concept of C language and to gain experience about structured programming. The course presents the concept of C programming knowledge to develop the problem solving skills using C environment, data representation, control structures, functions, arrays, pointers, strings, user defined data types, and file I/O.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Recognize the concept of C programming language.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Identify and solve problems systematically using structured programming approaches.	PO-2, PO-3	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Apply the advanced features such as pointer, structure, and file management systems of C programming to solve problems.	PO-3	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

C Programming Fundamentals: History of C, Importance of C, Programming structure of C, Constants, Variables, Keywords and identifiers, Data types, Operators, Type conversion in expression, Reading a character, Writing a character.

Decision Making and Looping: If statements, if-else statements, Nesting of if...else statements, else if ladder, switch statements, ? : Operator, goto statement, break and continue statements, for statement, while statement, do-while statement,.

Arrays: Introduction, One dimensional array, Declaration of one dimensional arrays, Initialization of one dimensional arrays, Two dimensional arrays, Initialization of two dimensional arrays.

Character Arrays and String: Introduction, Declaring and Initializing string variables, Reading string from terminal, Writing string to screen, Comparison of two strings, String-handling functions, Table of strings.

Pointers: Introduction, Accessing the address of a variable, Declaring pointer variable, Accessing a variable through its pointer, Pointers and arrays, Pointers and character string, Array of pointers, Pointers as function arguments, Pointers to function, Pointers to structure.

User-defined Function: Definition of functions, Function declaration, Function Arguments: Call-by-value and Call-by-reference; Returning from a Function: Returning value, Returning Pointers; Recursion, Passing arrays to functions, Passing string to function.

Structures and Union: Defining a structure, Declaring structure variables, Arrays within structure, Structure within structure, Structures and functions, Union, Sizes of structure, Accessing structure members, Structure initialization, Arrays of structures.

File Management in C: Introduction, Streams and Files, Defining and opening a file, Closing a file, Input/output operations on files.

Text Books:

1. E. Balagurushamy : Programming in ANSI C
2. Herbert Schildt : The Complete Reference

Reference Books:

1. Kernighan and Ritchie : The C Programming Language
2. Herbert Schildt : Turbo C/C++: The Complete Reference
3. Byron S. Gotfried : Programming with C

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

CO1	√		√	√
CO2	√	√	√	√
CO3		√	√	√

CSE1192: Structured Programming Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course provides practical experience to strengthen theoretical concepts of C programming. It develops students' problem-solving, logical thinking, and debugging skills through hands-on exercises. The course enables learners to write structured and efficient programs. It builds a strong foundation for advanced programming and supports academic and professional growth in IT fields.

Course Objective

The objective of this lab is to introduce the basic concepts of programming with C language. This lab includes control structure, array, function, pointer, structure, union and file management to develop C programs to solve various problems and thereby enhance their analyzing and problem solving skills.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write and debug computer programs to solve practical problems with C programming language using IDE.	PO-5	Psychomotor Level 4 (Articulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)
CO-2	Write individual or group report by solving open-ended problems with specific needs and requirements using C programming.	PO-8	Affective Level 4 (Organize)	☐ Programming ☐ Experiment ☒ Open-ended Lab ☐ Demonstration ☒ Practice Lab	☐ Lab Performance ☒ Lab Test ☐ Lab Report ☒ Open-ended Lab Report ☐ Project(Presentation)

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in the final exam, lab tests, assignments, class participation, quizzes and viva voice. Final numeric reward will be the compilation of:

- **Class participation (10%)**
- **Continuous assessment (lab test, assignments, open-ended lab report, quizzes, viva) (30%)**
- **Final exam (60%)**

COs	Assessment tools (Total 100%)

PHY1191: Electricity and Magnetism

75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

The course “*Electricity and Magnetism*” is designed to provide students with a strong foundation in the fundamental principles governing electric and magnetic phenomena, which are essential for understanding modern science and engineering applications. Core concepts such as Gauss’s Law, Faraday’s Law of Electromagnetic Induction, and Lorentz Force develop a strong theoretical foundation. It enables students to understand practical systems including capacitors, semiconductors, and DC/AC circuits. Overall, this course develops students’ analytical thinking, mathematical problem-solving ability, and conceptual understanding, preparing them for advanced studies and professional work.

Course Objective

The objective of this course is to introduce the basic concepts of electricity and magnetism. This course covers dipole, Gauss’s law, capacitors, dielectric, electric current, insulators, semiconductors, Faraday’s law, inductance, DC and AC circuits, and thermoelectric power.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Describe the behavior of electric dipole and the role of Gauss’s law with its applications.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Explain the characteristic of dielectric and the nature of Capacitors.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☐ Assignment ☐ Participation ☐ Presentation

CO-3	Apply Faraday's and Ampere's law to solve a variety of electromagnetic problems.	PO-2	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-4	Analyze the DC/AC circuits to solve physical problems.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Electrostatics and Its Applications: Electric charge, electric dipole, electric field, dipole in external field, Coulomb's law, electric potential, Gauss's law, capacitors, energy storage, dielectrics, sensors, capacitive devices.

Conductors, Insulators, and Capacitance Circuits: Electron theory, conductors, semiconductors, insulators, superconductors, polarization, parallel plate capacitors, RC circuits, charging/discharging, capacitor energy, filters, timing circuits, electronic devices.

Electric Current and DC Circuits: Concepts of electric current and current density, drift velocity, resistivity, electromotive force (EMF) and internal resistance, series and parallel circuits, DC circuits with LR, RC, and LCR in series, power in practical DC networks, and applications in filtering and timing circuits.

Magnetic Fields and Their Interaction: Magnetic induction, Lorentz force, force on charges, current-carrying conductors, torque on current loop, Hall effect, Biot–Savart law, solenoids, toroids, motors, magnetic sensors.

Electromagnetic Induction and Inductors: Faraday's experiment, Faraday's law, Ampere's law, motional EMF, self/mutual inductance, magnetic energy, galvanometers (moving coil, ballistic, deadbeat types), instrument transformers, practical transformers and inductors.

AC Circuits and Resonance: AC generation, waveforms, RMS/average values, form factor, complex number representation, AC circuits (LR, RC, LC, LCR), power

calculation, power factor, resonance, phasor diagrams, AC power systems, signal processing.

Thermoelectricity: Thermal EMF, Seebeck, Peltier, and Thomson effects, laws of addition of EMF, thermoelectric power, thermocouples, temperature measurement, cooling devices, power generation.

Transformers: Transformer construction, EMF equation, ideal/practical transformer, efficiency, regulation, hysteresis and eddy current losses, step-up/step-down transformers, power distribution.

Text Books:

1. Halliday, Resnick & Walker : *Fundamentals of Physics*

Reference Books:

1. Admas & Page : Electricity and Magnetism

MATH1111: Algebra, Trigonometry and Vector Analysis
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' analytical and problem-solving abilities by providing a strong mathematical foundation in algebra, trigonometry, complex variables, and vector analysis. It enables learners to apply mathematical concepts such as determinants, vector calculus, and integral theorems to model and solve engineering and scientific problems effectively.

Course Objective

The objective of this course is to introduce the methods of linear algebra, trigonometry, and vector analysis that will facilitate the students for solving engineering problems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the concept of linear algebra, trigonometry, and vector analysis.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Describe a physical interpretation of the gradient, divergence, curl and related concepts.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Evaluate the trigonometric function at an angle whose measure is given in degrees and radians.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Algebra of sets, De Morgan's rule, Relation & function. Determinants: Properties and Cramer's rule. Theory of Equations: Theorem, and relation between roots and coefficients, Solution of cubic equations.

De Moivre' theorem, Deduction from De Moiver's theorem. Functions of complex arguments, Gregory's series, Summation of series, Hyperbolic functions.

Vector addition, Multiplication and differentiation. Definitions of line, Surface and volume integral. Gradient of scalar function, Divergence and curl of vector function. Physical significance of gradient, Divergence and curl, Integral forms of gradient, Divergence and curl, Divergence theorem, Stoke's theorem, Green's theorem and Gauss's theorem.

CHEM1111: Physical and Inorganic Chemistry
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop a strong foundation in physical and inorganic chemistry by enabling students to understand core concepts such as electrochemistry, chemical kinetics, atomic structure, and chemical bonding. It equips learners with the ability to analyze chemical systems, interpret reaction mechanisms, and apply theoretical principles to practical and industrial processes.

Course Objective

The objective of this course is to provide the basic concepts of physical and inorganic chemistry.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the basic concepts of physical chemistry.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Demonstrate simple chemical kinetics including zero, first, and second order rate laws.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Explain the atomic structures of elements with their physical and chemical properties.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
	Describe valence bond theory and molecular orbital theory to explain the physical and chemical properties of molecules.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Electrochemistry: Conductors, Electrolytes and electrolysis; Faradays laws of electrolysis and their significance. Ohm's law and electrolytic conductances; Theories for electrolytic conductance (Arrhenius & Debye-Hückel). Ionic mobility, Kohlrausch's law, Transference number and its determination; Activities, Activity coefficient and Debye-Hückel limiting law. Electrochemical cells (Electrolytic and Galvanic/Voltaic): Electrode reaction and potentials. Reference electrodes; Reversible and concentration cells, Storage batteries (or accumulators).

Chemical Equilibrium and Kinetics: Equilibrium and equilibrium constants, K_c , K_p , K_x . Rate of reaction and rate constants; Le Chatelier principle and its application. Order and molecularity of a reaction; Integrated rate expressions & half-lives of zeroth, First and second order reactions. Determination of order & temperature dependence of a reaction; Energy of activation and Arrhenius equation. Transition-state theory of reaction rates. Characteristics of catalysis, Promoters and inhibitors.

Surface Chemistry and Colloids: Adsorption and sorption; Characteristics of physical and chemical adsorptions. Freundlich, Langmuir and Gibb's Adsorption isotherms; The BET equation. Crystalloids, Colloids and their classification, Preparation, Properties (kinetic, colligative, optical & electrical) and importance, Original pf charge and stability of colloids (sols), Gold number; Colloidal electrolytes. Elementary idea about emulsions and gels.

Atomic Structure and Periodic Table: Modern concept of atomic structure and periodic table; Related principles and laws. Constitution and periodic properties of elements (ionization potential, electronegativity, electron affinity, atomic and ionic radii). Grouping of elements, their properties and uses. Isotopes and radioactivity.

Electronic Theory of Valency and Chemical Bonding: Different types of bonds (ionic, covalent, co-ordinate, hydrogen and metallic) Classification of solids on the basis of bonding and their properties. Atomic orbital's and their hybridization; Valence bond and molecular orbital theories.

Chemistry of Transition Elements, Lanthanides and Actinides: Definitions, Electronic configurations, preparations (nuclear transformations), General properties and uses.

ENG1111: Technical and Communicative English
50 Marks, 2 Credits, 2 Hours/week, Lectures: 28, Exam time: 2 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to enhance students' proficiency in technical and communicative English by developing their grammatical accuracy, domain-specific vocabulary, and effective language use. It enables learners to communicate clearly and professionally through spoken interactions, technical writing, and comprehension of academic and industrial texts. The course further supports measurable outcomes by equipping students with essential communication skills required for academic success, research, and professional practice in engineering and technological fields.

Course Objective

The objectives of this course are to provide students with the tools for writing technical error free English, to develop effective and fast reading skill among the students, and to enable students to speak English with correct pronunciation and phonetics.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write report, technical articles and journals.	PO-9	Affective Level 1 (Receive)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Speak in English with the correct accent.	PO-9	Affective Level 2 (Respond)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Read newspaper, technical papers, text books etc. and interpret correctly and swiftly.	PO-9	Affective Level 1 (Receive)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
	Practice English conversation.	PO-9	Affective Level 1 (Respond)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Grammar: Grammatical principles, Modals, Phrases & idioms, Prefixes & suffixes, Sentence structures, Why & yes/ no questions, Conditional sentences.

Vocabulary: Technical & scientific vocabulary, Defining terms.

Spoken English: Introduction to phonetic symbols, Dialogue, Responding to particular situations, Extempore speech.

Reading: Comprehension of technical & non-technical materials-skimming, Scanning, Inferring & responding to context.

Technical Writing: Paragraph & composition writing on scientific & other themes, Report writing, Research paper writing, Library references.

Professional Communication: Business letter, Job application, Memos, Quotations, Tender notice.

Reference Book:

1. A. J. Thomson & A. V. Martinet : A Practical English Grammar
2. John M. Lennon : Technical Writing
3. A. Ashley : Oxford Handbook of Commercial Correspondence
4. J. Swales : Writing Scientific English
5. Robert J. Dixon : Complete Course in English
6. Rajendra Pal & J. S. Korlahalli : Essentials of Business Communications

Assessment and Evaluation Strategy:

Students will be assessed on basis of their overall performance in the final examination, class tests/assignments/quizzes, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final examination (70%)**

First Year, Second Semester

ICE1211: Data Structures and Algorithms

75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: CSE 1191

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

The course helps students analyze trade-offs among different ways of organizing data to ensure optimal use of memory and processing resources. By mastering these concepts, students go beyond programming syntax and gain an understanding of universal problem-solving patterns that apply across all programming languages. Ultimately, this course forms the foundation of ICE, enabling the creation of complex systems capable of handling large-scale real-world data efficiently.

Course Objective

The objectives of this course are to provide the foundations of the practical implementation and usage of data structures and algorithms. This course ensures that the student evolves into a competent programmer capable of designing, analyzing and implementing the algorithms and data structures for different kinds of problems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Describe different types of data structures and algorithms.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Analyze how the choice of data structures and algorithms design methods impacts the performance of programs.	PO-2, PO-3	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☒ Presentation
CO-3	Solve complex problems using the knowledge of advanced algorithms.	PO-3	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☒ Presentation

Course Contents

Introduction: Data types and data structures, data structure operations, performance analysis, linear arrays, relationships of arrays, operation on arrays, multidimensional arrays, pointers, record structures, representation of records, sparse matrices.

Linked List: Linked lists, Representation of linked list, Traversing and searching a linked list, Doubly linked list and dynamic storage management, Generalized list, Garbage collection and compaction.

Stacks, Queues and Recursion: Fundamentals, Different types of stacks and queues, Evaluation of expressions, Recursion, Direct and indirect recursion, Depth of recursion, Implementation of recursive procedures by stacks.

Trees and Graphs: Basic terminologies, Binary trees, Binary tree representation, Tree traversal, Extended binary tree, Huffman codes/algorithm, Graphs, Graph representation, Traversing a graph, Shortest path and transitive closure.

Sorting and Searching: Insertion sort, Heap sort, Bubble sort, Radix sort, Complexity of different types of sorting.

DivideandConquermethod: General method of divide and conquer technique, The maximum sub array problem, Merge sort, Quick sort, Selection sort, Binary search.

Greedy Methods: The general method, Knapsack algorithm, Tree vertex splitting, Job sequencing with deadline, Optimal merge patterns, Minimum cost spanning trees: Prim's algorithm, Kruskal's algorithm.

Dynamic Programming: The general method, multistage graphs, All pairs shortest paths, Single source shortest paths problems, The travelling salesman problem.

Text Books:

1. S Lipschutz : Theory and Problems of Data Structures
2. E. Horowitz and S. Sahni : Computer Algorithm

Reference Books:

1. E. Horowitz and S. Sahni : Fundamentals of Data Structures
2. Reingold : Data structures
3. T. H. Cormen, C. E. Leiserson : Introduction to Algorithms

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes** (20%)
- **Class participation** (10%)
- **Final exam** (70%)

ICE 1212: Data Structures and Algorithms Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This lab transforms abstract mathematical logic into functional code, allowing students to bridge the gap between pseudocode and real-world implementation. By manually coding structures like trees and graphs, students develop a deep understanding of memory management and the practical trade-offs involved in data manipulation. Ultimately, this hands-on practice builds the debugging resilience and optimization skills essential for engineering scalable software solutions.

Course Objective

The objective of this lab is to introduce the implementation of basic data structures with an IDE. This lab includes array, linked list, stack, queue, tree and graph data structures to write programs for solving problems with different algorithms to enhance their analyzing and problem solving skills.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write and debug computer programs to solve problems using different data structures and algorithms with an IDE.	PO-5	Psychomotor Level 4 (Articulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☐ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☐ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)
CO-2	Write individual or group report by solving open-ended problems with specific needs and requirements using the IDE.	PO-8	Affective Level 4 (Organize)	☒ Programming ☒ Experiment ☒ Open-ended Lab ☐ Demonstration ☒ Practice Lab	☐ Lab Performance ☒ Lab Test ☐ Lab Report ☒ Open-ended Lab Report ☐ Project(Presentation)

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in the final exam, lab tests, assignments, class participation, quizzes and viva voce. Final numeric reward will be the compilation of:

- **Class participation (10%)**
- **Continuous assessment (lab test, assignments, open-ended lab report, quizzes, viva) (30%)**
- **Final exam (60%)**

COs	Assessment tools (Total 100%)

PHY1291: Electronics-II
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: ICE1111

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' understanding of advanced electronic circuits and systems by exploring feedback mechanisms, amplifiers, oscillators, operational amplifiers, and microelectronic technologies. It enables students to analyze, design, and evaluate electronic circuits with considerations of gain, stability, frequency response, and efficiency for real-world applications. The course further supports measurable outcomes by equipping students with the theoretical knowledge required to innovate and optimize modern electronic and communication systems.

Course Objective:

The objective of this course is to develop the concept of advanced analog electronic circuits, focusing on feedback principles, frequency response, multistage amplifiers, and sinusoidal oscillators. The course also introduces power amplifiers, operational amplifiers, optoelectronic devices, and fundamental microelectronic fabrication technologies, enabling students to understand the operation, characteristics, and applications of modern electronic and integrated circuit systems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

COs	CO Statement	Corresponding PO	Domain / Level of Learning Taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain feedback mechanisms of electronic amplifiers and their impact on the gain, bandwidth, stability, and distortion.	PO-1	Cognitive Level 2 (Understanding)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Analyze and design single-stage and multistage amplifier circuits using appropriate coupling techniques and performance criteria.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

CO-3	Analyze the principles and operations of the sinusoidal oscillators and OP-AMP based circuits.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-4	Explain the operation and applications of power amplifiers, optoelectronic devices, and basic microelectronic fabrication technologies.	PO-1	Cognitive Level 2 (Understanding)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Feedback: Concept of feedback, Negative feedback, Positive feedback, Voltage feedback, Current feedback, Effect of feedback on Impedance, Gain, Bandwidth, Distortion and Stabilization.

Low and High Frequency Response: Effect of emitter bypass capacitor and coupling capacitor, Low-frequency response of cascaded CE stages, High frequency model for CE amplifier, CE short circuit current gain, High frequency current gain with resistive load, High frequency response of cascaded CE stages.

Multistage Amplifier: Amplifier coupling, RC coupled two-stage amplifier, Impedance coupled twostage amplifier, Transformer coupled two-stage, Direct coupled two-stage amplifier, Darlington pair, Multistage frequency effect.

Oscillators: Positive feedback, Condition of oscillation and stabilization, Hartley oscillator, Colpitt's oscillator, RC phase shift oscillator, Wein bridge oscillator, Resonant circuit oscillators.

Operational Amplifier: Difference amplifier, CMRR, Ideal operational amplifier, Inverting amplifier, Non-inverting amplifier, Differential amplifier, General-purpose IC operational amplifier, Integrator, Differentiator, Precision rectifier.

Power Amplifiers: Definition, Classification of power amplifiers, Performance quantities of power amplifiers, Series fed class A amplifier, Transformer coupled class A amplifier, Class B operation and amplifier circuits, Push-pull amplifier.

Optoelectronic Devices: Photodiode, Phototransistor, Solar cell, Photoconductive cell, Photovoltaic sensors, LED, LCD, Alphanumeric display, Photo couplers, High-speed optical detectors, IR emitters.

Micro-Electronics: Micro electronic technology, Planer processor, Bipolar transistor fabrication, FET fabrication, CMOS technology, Monolithic diodes, Metal semiconductor contact; IC resistor and capacitor, IC packing; Characteristics of IC components, Microelectronic circuit layout, printed circuit board.

Text Books:

1. Gupta and Kumar : Handbook of Electronics
2. Allen Mottershead : Electronic Devices and Circuits
3. Ramakant A. Gayakwad : Op-Amps and Linear Integrated Circuits

CO4		√	√	√

PHY1292: Electronics-II Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: ICE1112

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide hands-on experience in analyzing and implementing electronic circuits such as amplifiers, oscillators, and operational amplifier-based systems. It enables students to practically investigate circuit behavior, measure performance parameters, and validate theoretical concepts using modern laboratory instruments and simulation tools. The lab further supports measurable outcomes by enhancing experimental skills, circuit design competence, and the ability to troubleshoot and optimize real-world electronic systems.

Course Objective:

The objective of this lab is to provide practical understanding of electronic circuits and semiconductor devices through hands-on experimentation. It covers the characteristics of emitter followers, construction and testing of oscillators, and the characteristics and applications of operational amplifiers.

Course Outcomes (Cos), Program Outcomes (POs) and Assessment:

Cos	CO Statement	Corresponding PO	Domain / Level of Learning Taxonomy	Delivery methods and activities	Assessment tools
CO-1	Analyze the characteristics of emitter follower and operational amplifiers.	PO-4	Psychomotor Level 1 (Imitate)	☐ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☒ Lab Quiz ☒ Viva

MATH1211: Differential and Integral Calculus
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' analytical and mathematical problem-solving skills by providing a comprehensive foundation in differential and integral calculus. It enables learners to model and analyze engineering problems using concepts such as limits, differentiation, integration, and multivariable calculus techniques. The course further supports measurable outcomes by enhancing students' ability to apply calculus-based methods in real-world applications, optimization, and quantitative analysis.

Course Objective

The objective of this course is to introduce the concept of differential and integral calculus. The course also provides concepts in building skill for analyzing and solving engineering problems.

Course Outcomes (Cos), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the basic concept of differential and integral calculus.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

CO-4	Solve practical problems using integral and differential approaches.	PO-2	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Functions: Domain, Range, Inverse function and graphs of functions, Limits, Continuity, Indeterminate form.

Ordinary Differentiation: Differentiability, Differentiation, Successive differentiation and Leibnitz theorem.

Expansions of Functions: Rolle's theorem, Mean value theorem, Taylor's and Maclaurin's formulae, Maximum and minimum of functions of one variable.

Partial Differentiation: Euler's theorem, Tangents and normal, Application of derivatives.

Indefinite Integrals: Method of substitution, Integration by parts, Special trigonometric functions and rational fractions.

Definite Integrals: Fundamental theorem, General properties, Evaluations of definite integrals and reduction formulas.

Multiple Integrals: Determination of lengths, Areas and volumes.

Reference Books:

1. B. C. Das and B.N. Mukherjee : Differential Calculus.
2. B. C. Das and B.N. Mukherjee : Integral Calculus.
3. F. Ayres : Calculus.
4. Edwards : Differential Calculus.
5. Williamson : Integral Calculus.
6. Muhammad and Bhattacharjee : Differential Calculus.
7. Muhammad and Bhattacharjee : Integral Calculus

Assessment and Evaluation Strategy:

Students will be assessed on basis of their overall performance in the final examination, class tests/assignments, and class participation. Final grade will be evaluated based on:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation(10%)**
- **Final examination(70%)**

STAT1211: Statistics for Engineers
50 Marks, 2 Credits, 2 Hours/week, Lectures: 28, Exam time: 2 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' ability to analyze and interpret engineering data using statistical methods. It equips learners with essential skills in probability, random variables, regression analysis, and hypothesis testing to support data-driven decision-making and problem-solving. The course further ensures measurable outcomes by enabling students to apply statistical tools and models in real-world engineering applications, uncertainty analysis, and research contexts.

Course Objective

The objective of this course is to provide students with the basic concepts of statistics, statistical distributions, probability and their extensive use in real life situations, in particular, in the area of science and engineering. This course covers random variables, logistic regression and different kind of tests.

Course Outcomes (Cos), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the concept of probability and statistics.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Apply the rules and algorithm of probability to solve different problems.	PO-1	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Explain basic ideas of linear regression and correlation.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-4	Conduct and interpret hypothesis tests.	PO-1	Cognitive Level 1 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Analysis of Statistical Data: Location, Dispersion and their measures, Skewness, Kurtosis and their measures, Moment and Cumulants and practical examples.

Probability: Concept of probability, Sample space, Events union and intersection of events. Probability of events, Loss of probability, Conditional probabilities. Bose Einstein Statistics. Bay's theorem, Chebysec's Inequality and practical examples.

Random Variables and Probability Distribution: Basic concepts, Discrete and continuous random variables, Density and distributional functions, Mathematical expectation and variance, Joint marginal and conditional density functions, Conditional expectation and conditional variance. Moments and Cumulant generating functions. Characteristic function. Study of binomial, Poisson, normal and Bivariate normal distribution and practical examples.

Linear Regression: Correlation, Rank correlation. Partial and multiple correlations linear regression for two Variables, Principle of least squares method, Lines of best fit, Residual analysis and examples.

Test of Significance: Basic ideas of Null hypothesis, Alternative hypothesis, Type-I error Type-II error level of significance degree of freedom, Rejection region and acceptance region. Test of single mean, Single variance, Two sample means and variances. Test for 2×2 contingency tables, Independence test and practical examples.

Reference Books:

LAW1211: Cyber Law and Engineering Ethics
50 Marks, 2 Credits, 2 Hours/week, Lectures: 28, Exam time: 2 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course provides students with essential knowledge of the legal and ethical responsibilities involved in engineering and digital technologies. It combines cyber law and engineering ethics to address real-world challenges in today's technology-driven society.

Course Objective

The objective of this course is to provide the students with insights on cyber law, ICT policy of Bangladesh, intellectual property rights and engineering ethics.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Identify cybercrime and develop consciousness about cyber security and laws.	PO-1, PO-6	Affective level 3, (Value)	☒ Lecture notes ☒ Text books ☒ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Explain the ICT act of Bangladesh, and intellectual property rights.	PO-2	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Understand professional ethics, and responsibilities as engineer in organization.	PO-2, PO-7	Affective level 4, (Organize)	☒ Lecture notes ☒ Text books ☒ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Cyber Law and Cyber Crime: Definition, Scope, Utility of Cyber Law, International Cyber Law, Jurisdiction and Cyber crime, Criminal Justice in Bangladesh and Implications on Cyber Crime, Cyber vandalism, Hacking, Malicious spreading in Viruses, Password fraud, Cyber Pornography, Human Rights violation and Internet.

ICT Policy in Bangladesh: Information and Communication Technology Act, 2006, e-Readiness in Bangladesh, e-Commerce in Bangladesh, e-Governance in Bangladesh, e-Learning/Education in Bangladesh, e-Journal in Bangladesh, e-Voting in Bangladesh, Digital signature, Electronic Evidence in Bangladesh.

Intellectual Property Law, Patent and Trade Marks: Basic Concepts of IP and IPR, Computer-related Intellectual property rights, Copyright, New technology and copyright, Patents and technological development, Patentability and ownership of

patents, Scope of IPR and duration of protection, Software Patents and Copyright, International Convention copy right, Protection of trademarks, Trademarks in Cyberspace.

Professional Ethics: Profession, Engineering and Professionalism, Models of Professionalism, Types of Ethics and morality, Preventive Ethics, Aspirational Ethics, Professional Character.

Responsibility in Engineering: Engineering Standards, Risk and Liability in Engineering, Design Standards, Framing the problem: Determining the Facts, Clarifying Concepts, General Principles, Respect for persons, Resolving Problems: Ethics and Design, Line Drawing, Conflicting Values, Convergence, Divergence and Creative Middle Ways.

Engineers in Organizations: Engineers and Managers, Proper Engineering and Management Decisions, Responsible Organizational Disobedience, The scope of Professional Engineering Obligations to the Environment, Ethical Resources for Solving Boundary Crossing Problems.

Text Books:

1. VivckSood : Cyber Law Simplified, Tata McGraw Hill
2. V. D. Dudej : Publications
Information Technology & Cyber Laws,
3. Charles E. Harris, : Commonwealth Publishers
Michael S. Pritchard, Engineering Ethics Concepts and Cases
Michael J. Rabins

Reference Books:

ECON1211: Economics
50 Marks, 2 Credits, 2 Hours/week, Lectures: 28, Exam time: 2 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to provide students with a foundational understanding of economic principles and their relevance to engineering decision-making. It enables learners to analyze market behavior, production systems, and macroeconomic indicators such as national income, inflation, and fiscal policy, particularly in the context of Bangladesh's economy. The course further supports measurable outcomes by developing students' ability to apply economic reasoning to real-world engineering, policy, and development planning challenges.

Course Objective

The objective of the course is to build awareness about how the world works, including industries, businesses and governments. This course also covers topics about the balance of scarcity of resource to produce the desired goods and services and how to distribute them efficiently among the people.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Identify and recognize economic problems of a country.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Basic Concepts of Economics: Definition and subject matter of economics; Microeconomics vs macroeconomics; Law of economics; Central economic problems of every society; Different economic systems; Economics and engineering.

Theory of Demand, Supply and Consumer Behavior: Law of demand; Demand schedule and demand curve; Supply law, Supply schedule and supply curve; Shift in demand and supply; Equilibrium in the market; Elasticity of demand and supply.

Production and Costs and Theory of the Firm: Meaning of production; Factors of production; Concepts of total, average and marginal costs, Fixed and variable costs.

Theory of the Firm: Perfect competition and monopoly; Total, Average and marginal revenue of a firm; Average and marginal revenue under perfect competition and monopoly; Firm's equilibrium; Equilibrium of firm under perfect competition and monopoly.

The Input-Output Analysis: Meaning of input-output analysis; Input-output analysis model; Balance equation; Coefficient matrix; Determination of final demand vector.

Basic Concepts of Macroeconomics: Growth; Unemployment; Inflation; Philips curve, Business cycle; Circular flow of economics; Two, Three and four sector economics.

National Income Accounting and Determination: Concepts of GNP, GDP and national income; Methods of national income accounting; Problems of national income accounting; Keynesian model of national income determination; The multiplier; Effect of fiscal policy in the Keynesian model.

Budgets of Bangladesh: The revenue at the capital budget; Income, Expenditure of the government; Direct and indirect taxes.

Development Planning in Bangladesh: Need for planning in Bangladesh; Various five year plans in Bangladesh; Development strategies in the five year plans of Bangladesh.

Reference Books:

1. Samuelson and Nordhaus : Economics
2. Byrns and Stone : Economics
3. Dewett, K. K. : Modern Economic Theory
4. Ahuja, H. L. : Advanced Economic Theory
5. Government of Bangladesh : Various Five Year Plans

Assessment and Evaluation Strategy:

The assessment strategy for a student will be overall performance in all the final exams, class tests/assignments/quizzes, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

ICE1210: Viva-Voce
25 Marks, 1 Credit

Prerequisite: None

Course Type: ☐ Theory ☐ Laboratory work ☐ Project work ☒ Viva Voce

Course Rationale:

This course is designed to assess students' comprehensive understanding of their academic program through oral examination. It enables learners to articulate theoretical knowledge, justify problem-solving approaches, and demonstrate the integration of concepts across multiple disciplines. The course further supports measurable outcomes by enhancing communication skills, critical thinking, and the ability to respond confidently and effectively to professional and technical inquiries.

Course Objective

The objective of the course is to enable students to express verbally their knowledge gained from the theory and lab courses of First Year in an effective and clear manner.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Assessment tools
CO-1	Communicate and express verbally the knowledge obtained in an effective and clear manner.	PO-9	Affective Level 2 (Respond)	☒ Viva Voce

Second Year, First Semester

ICE2111: Object-Oriented Programming 75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: CSE1191

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop a strong foundation in object-oriented design and programming using Java, a widely used, platform-independent language. It emphasizes core OOP principles such as encapsulation, inheritance, and polymorphism, enabling students to build strong background on modular, reusable, and scalable applications. The course also integrates GUI development, exception handling, file processing, multithreading, networking, and database connectivity, preparing students for real-world software development.

Course Objective

The objective of this course is to introduce the basic concepts of Object Oriented Programming (OOP) and demonstrate skills in writing programs using OOP concept, Graphical User Interface (GUI) technique, multithreading, and Java Database Connectivity (JDBC). The course also focuses on event and exception handling techniques and network programming concept using socket programming.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Describe the syntax and semantics of Java programming language and basic concepts of OOP.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Develop reusable programs using the concepts of inheritance, polymorphism, interfaces and packages.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Design event driven GUI programming, multithreading, and JDBC applications to solve the real world problems.	PO-3	Cognitive Level 4 (Create)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-4	Apply the concepts of socket programming to develop network program.	PO-3	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion	☒ Class test ☒ Final exam ☒ Assignment

				☐ Audio/video	☐ Participation
				☐ Web material	☐ Presentation

Course Contents

Introduction to Java: History of Java, Java features and advantages, Class, Object, Abstraction, Encapsulation, Inheritance, Polymorphism, Creating classes with Java, Concept of constructors, Using JDK, Data types, Arrays, Operators and control flow.

Methods: Using methods, declaring a class method, Implementation of inheritance, calling a class method, Passing parameters, Variables, Local variables and variable scope.

Using Standard Java Packages: Creating graphical user interfaces with Swing, Managing graphics objects with GUI layout managers, Event handling of various components.

Exception Handling: Overview of exception handling, the basic model, Hierarchy of event classes, Throw clause, throws statement, try-catch block.

Managing Input/Output Streams in Java: Introduction, Concept of streams, Stream classes; Byte stream class, Character stream class, Other useful I/O classes, Using the file class.

Thread: Introduction, Multithread, Synchronization, Deadlock.

Socket Programming: Socket basics, Socket-based network concepts, Client server basics, Socket for client, Socket for server.

Java Database Connectivity: JDBC, JDBC drivers, the JAVA.sql packages, SQL, JDBC connection and executing SQL.

Text Books:

1. John Murkowski : Mastering Java 2
2. Herbert Schildt : The Complete Reference of Java 2
3. E. Balagurusamy : Programming with Java

Reference Books:

1. H.M. Deitel and P.J. Deitle : Java: How to Program
2. H. Schildt, McGraw-Hill : Teach Yourself Java
3. Patrick Niemeyer, Jonathan Knudsen : Learning Java
4. Ken Arnold, James Gosling, David Holmes : Java Programming Language

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

ICE2112: Object-Oriented Programming Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: CSE1192

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to provide students with essential programming skills using object-oriented principles such as encapsulation, inheritance, polymorphism, and abstraction. It enables learners to develop modular, reusable, and scalable software. The course also introduces platform-independent application development using Java, preparing students for advanced topics and real-world software engineering challenges in academic and professional environments.

Course Objective

The objective of this lab course is to introduce the basic concepts of OOP using Java. This lab includes GUI, event and exception handling, JDBC, multi-threading and network programming with sockets.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools

ICE2121: Digital Electronics**75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours****Prerequisite:** ICE1111, PHY1291**Course Type:** ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce**Course Rationale:**

This course is designed to develop students' fundamental understanding of digital systems by covering number systems, Boolean algebra, logic gates, and the design of combinational and sequential circuits. It enables students to analyze and design digital circuits using systematic methods such as logic simplification, state modeling, and programmable logic devices. The course further supports measurable outcomes by equipping students with the knowledge required to design and evaluate modern digital systems used in computing, communication, and embedded applications.

Course Objective:

The objective of this course is to acquire knowledge about number systems, Boolean algebra and function minimization techniques. This course includes the understanding of digital logic gates and its application in digital electronics. The course explains analysis and design procedure of the combinational and sequential logic circuits.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Describe the principles of number systems, Boolean algebra and minimization techniques.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☒ Presentation

Course Contents

Number System: Binary numbers, Number base conversion, Binary, Decimal, Octal and Hexadecimal numbers, Complements, Binary code, Binary storage.

Boolean Algebra: Basic definitions, Axiomatic definitions of Boolean algebra, Basic theorem and properties, Boolean function, DeMorgan's theorem, Canonical and standard forms.

Logic Gates: Logic Elements, Electronic Logic Gate Circuits, Diode logic, Direct couple transistor logic, Resistor transistor logic, Transistor transistor logic.

Simplification of Boolean functions: Map method, Two-three-four-five-six variable maps, Sum of product and product of sum simplification, NAND and NOR implementation, Don't care conditions, Tabulation method.

Combinational Logic: Design procedure, Adders, Subtractors, Code conversion, Binary parallel adder, Decimal adder, Magnitude comparator, Encoder, Decoder, Multiplexer, De-multiplexer.

Sequential Logic: Design procedure, Flip-flops, Master-slave Flip-flop, Analysis of clocked sequential circuits, Flip-flop excitation tables, Design with state equations.

Registers and Counters: Registers, Shift registers, Design of counters, Ripple counters, Synchronous counters.

Memory and Programmable Logic: Random Access Memory (RAM), Read Only Memory (ROM), EPROM, EEPROM, Programmable Logic Array (PLA).

Text Books:

1. M. Morris Mano : Digital Logic and Computer Design
2. V.K. Jain : Switching Theory and Digital Electronics

Reference Books:

3. M. Morris Mano : Digital and Computer Design
4. S.C. Lee : Digital Circuit and Logic Design
5. Tocci & Widmer : Digital Systems

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

ICE2122: Digital Electronics Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: ICE1112

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide hands-on experience in designing and implementing digital circuits using logic gates, flip-flops, registers, counters, and memory devices. It enables students to verify theoretical concepts through simulation and hardware implementation while developing skills in circuit design, testing, and troubleshooting. The lab further supports measurable outcomes by fostering practical competence, logical thinking, and the ability to build and analyze real-world digital systems.

Course Objective

This lab aims at practical experience with the logic gates and its applications in digital systems. Experiments of this lab include the design of simple combinational and sequential logic circuits and test/verify the functionality of the circuits using various types of digital logic ICs.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools

EEE2191: Electromagnetic Fields and Waves
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: MATH1111

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course aims to develop students' understanding of electromagnetic field theory and wave propagation based on Maxwell's equations. It equips learners with analytical skills to study electromagnetic waves in different media, transmission lines, and waveguides. The course also enables students to apply electromagnetic principles in communication, microwave, and high-frequency engineering applications.

Course Objective

The focus of this course is to introduce the basic concept of electromagnetic fields and waves by exploring Maxwell's equations. The course also covers wave propagation, reflection, and refraction in various media and application of Smith chart to solve transmission line problems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Interpret the expressions of Maxwell's equations and the associated theorems.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Explain the properties of electromagnetic waves in dielectric and conducting media.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Analyze the electromagnetic wave propagation across the transmission line and waveguide using Smith chart.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Field Equations: Field equations based on laws of Coulomb, Ampere and Faraday, Displacement current; Maxwell's equation, physical interpretation of Maxwell's equations, Units and dimensions of field vectors, Scalar potential, Vector potentials and Retarded potentials.

Electromagnetic Waves in Dielectric Medium: Wave equations, simple medium, Plane wave and uniform plane wave concept, transverse nature of uniform plane wave, Plane electromagnetic waves in perfect dielectric and lossy-dielectric medium, intrinsic impedance, propagation constant of dielectric medium.

Electromagnetic Waves in Conducting Medium: Wave equations for conducting medium and good conductor, intrinsic impedance and propagation constant of conducting medium, depth of penetration, Poynting vector in conducting medium, compare conducting and dielectric medium, Electromagnetic wave polarization.

Reflection and Refraction of Electromagnetic Waves: Boundary conditions, The laws of reflection and Snell's law of refraction, Reflection from dielectrics and conductors, Fresnel's equations, The Brewster angle, Total reflection, Skin effect, Phase and group velocities, Reflection and refraction in the ionosphere.

Transmission Lines: Concept and definition, Different kinds of transmission lines, Applications, Primary constants, Secondary constants, General transmission line equations, Line termination, Reflection of transmission line, Standing wave ratio.

Impedance Matching in High Frequency Lines: Concept and definition, various techniques of impedance matching, Smith chart and its applications.

Fundamentals of Waveguide: Introduction, Types, Waveguide transmission, Different modes of a waveguide, Phase velocity and Group velocity, Waveguide equation, Waveguide attenuation, Applications.

Rectangular and Circular Waveguides: Definitions, Boundary conditions, Transverse Electric (TE) and Transverse Magnetic (TM) mode analysis, Sketches of TE and TM mode fields, Power transmission and Power loss expressions.

Text Books:

1. Gupta Kumar Sing : Electrodynamics
2. K.D. Prasad : Antenna and Wave Propagation
3. F.R. Connor : Wave Transmission

Reference Books:

4. Corson and Lorain : Introduction to Electromagnetic Field and Wave
5. A.V. Bakshi : Transmission Lines and Waveguide
6. J.D. Ryder : Networks, Lines and Fields
7. Sanjeeva Gupta : Microwave Engineering

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

MATH2111: Matrices and Differential Equations
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: MATH1111, MATH1211

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' analytical and computational skills by providing a strong foundation in matrices and differential equations. It enables learners to solve systems of linear equations, analyze eigenvalues and eigenvectors, and model engineering phenomena using ordinary and partial differential equations. The course further supports students to apply mathematical techniques such as matrix methods, series solutions, and transformations to real-world engineering and scientific problems.

Course Objective

The objective of this course is to present basic concepts of matrices and differential equations. This course covers matrix algebra and higher orders differential equation to solve engineering problems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Identify special properties of a matrix that are used to facilitate the calculation of matrix characteristics.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Explain first order and higher order differential equations.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-4	Apply appropriate differential equation technique to solve engineering problem.	PO-2	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Algebra of Matrices: Adjoint, Inverse and rank of matrix-definition, Properties and evaluation.

Elementary Transformations: Echelon: Canonical and normal forms, Solution of system of linear equations, Consistency and solution of homogeneous and nonhomogeneous systems by matrix method, and reduction to equivalent system.

Characteristic Equation: Eigenvalues, Eigenvectors and Caley-Hamilton theorem, Similar matrices and diagonalization.

Solutions: First order and first degree and first-order and higher degree equations with variable coefficients, Solution of higher-order linear differential equations.

Differential Equations: Series solution of linear differential equation, Series solution of second order equation with variable coefficients, Solutions of partial differential equation, Laplace's equation and transformation, Poisson's equation, Helmholtz's equation, Diffusion equation, Green's function solution, Integral equation.

Reference Books:

1. M. L. Khanna : Matrices
2. S. L. Ross : Introduction of Ordinary Differential Equations
3. F. Ayres : Theory and problems of Matrices
4. Moduffe : Theory of Matrices
5. F. Ayres : Differential Equations
6. B. D. Sharma : Differential Equations
7. L. Pipes : Applied Mathematics for Engineers and Physicist
8. I. S. Sokolnikoff & R. M. Redheffer : Mathematics for Physics and Modern Physics

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

STAT2111: Basic Theory of Statistics
50 Marks, 2 Credits, 2 Hours/week, Lectures: 28, Exam time: 2 hours

Prerequisite: STAT1211

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to provide students with a rigorous foundation in statistical theory by focusing on sampling distributions, estimation techniques, and hypothesis testing. It enables learners to apply probabilistic models and inferential methods such as maximum likelihood estimation, significance testing, and decision rules to analyze data and draw valid conclusions.

Course Objective

The objective of the course is to provide the basic concepts of data analysis and statistical computing. This course covers basic descriptive measures, measures of association, probability theory, confidence intervals, and hypothesis testing.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Demonstrate different distributions.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Analyze the nature of probability distributions through direct calculation.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Demonstrate knowledge of applicable large sample theory of estimators and tests.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-4	Apply the concepts of parametric and non-parametric tests.	PO-1	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Parent and Sampling Distributing: Different parent distribution, Fisher's Lemma. Study of χ^2 distribution, T-distribution and F-distribution, Properties, uses and applications. Distribution of sample correlation coefficient in the null case. Sampling distribution of the medians and range.

Elements of Point Estimations: Basics concepts, Consistent estimates, Unbiased estimates, Mean and variance of estimates, Ideas of efficiency, Principle of maximum likelihood, Illustration from binomial, Poisson and normal distributions.

Decision Rules: Statistical decision; Critical region, Best critical region; Two types of errors, Procedure of test of hypothesis; Most powerful test; Standard errors.

Test of Significance: Test of single mean and single variance, Comparison of two sample means, Proportions and variances, Bartlett's tests for homogeneity of variances, Test for correlation and regression coefficients. Exact test for 2*2 tables, Test for r*ctables, Three-way contingency tables. Large ample test of significance, Non parametric test, One sample and two sample sign test, Run test and rank sum test.

ACCO2111: Industrial Management and Accountancy
50 Marks, 2 Credits, 2 Hours/week, Lectures: 28, Exam time: 2 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to provide students with a comprehensive understanding of industrial management principles and accounting practices. It enables learners to analyze organizational behavior, formulate business strategies, manage projects, and apply accounting and cost-control techniques for effective decision-making in industrial environments.

Course Objective

The main objective of the course is to provide an opportunity for students to understand how managers in industrial management and accounting use finance theory and applications for decision making. This course also covers key finance methods used by management accountants for a variety of planning, strategic and risk management decisions.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Identify the organizational and industry environment in which a company operates along with key the value-chain participants and associated activities in which finance concepts apply.	PO-10	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Describe how theories of finance apply to management accounting practice.	PO-10	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Apply the concept of finance in management accounting and control using case studies.	PO-10	Affective Level 4 (Organize)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-4	Identify, compile and analyze financial accounting data for the management team to make decisions.	PO-10	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Business and Industry: Basic concept of business and industry, Objectives of business, Types of business, Types of industry, Business and society, Business environment, and ethical issues of business.

Management and Organizational Behavior: Concept of management, Management principles and functions: Planning and decision making, Organizing, Leading, and controlling, Levels of management, Manager and roles of management, Scientific management and core management skills, Corporate social responsibility, Organizational structure of industrial organization, Importance and scope of organizational behavior in a global context, Motivation, Values, Attributes, Job satisfaction, Morale, Counseling, Stress, Frustration.

Strategy Policy and Project Management: Concept of strategy, Strategy formulation factors, SWOT analysis, Business strategy and goal evaluation, Strategy formulation in IT industry, Strategy vs policy, Concept of project and project management, Project life cycle, Preparation of project proposal, Scheduling, budgeting, Procurement, Project monitoring and evaluation.

Accountings: History, Scope and nature of accounting, Purpose of accounting, Accounting equation, Meaning and classification of account, Double entry system, Rules for determining debit and credit, Accounting cycle journal, Ledger and trial balance, Worksheet, Income Statement, Balance sheet.

Cost Concepts and Cost-Volume-Profit Relationship: Meaning of cost, Different types of costs, Contribution margin and ratio analysis, Break-even analysis, CVP relationship in graphical form and target net profit analysis.

Materials Control: Material in industry, Inventory control model, ABC analysis, Safety stock, Reorder, Level, Economic ordering quantity, Stores equipment, Stores records, Purchasing procedures, Purchase records, Bin card, Material handling, Manual lifting.

Second Year, Second Semester

ICE2211: Cellular and Mobile Communication
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: STAT1211

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

The course **Cellular and Mobile Communication** equips students with a rigorous foundation in the principles and design of modern wireless systems. With a focus on fundamental ideas including frequency reuse, handoff techniques, interference management, and capacity augmentation, it explores the development of cellular technology. Through the study of wireless networking frameworks and radio propagation models, the course enhances students' analytical skills. Students gain the theoretical knowledge and practical skills necessary to assess, design, and optimize mobile communication systems by interacting with modern standards and system architectures. This prepares them for further study and professional practice in telecommunications and related engineering fields.

Course Objective

The focus of this course is to make the students familiar with cellular and mobile communication systems including 2G, 3G and next generation systems. Along with the overview, this course provides advanced knowledge including mobile radio propagation models and different wireless standards. This course also enables the students to develop an understanding of the challenges for designing cellular mobile communication systems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the basic principles of the cellular mobile communication system.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Develop cellular mobile communication system considering the channel interferences, system	PO-3	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

	capacity and intelligent cell concepts.				
CO-3	Analyze and design mobile radio propagation models.	PO-2, PO-3	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-4	Describe and differentiate various wireless standards.	PO-1	Cognitive Level 1 (Remembering)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Introduction: Introduction to Cellular Mobile Radio Systems: Limitations of conventional mobile telephone systems, a basic cellular system, performance criteria, operation of cellular systems, planning a cellular system, overview of generation of the cellular system.

Cellular Engineering Fundamentals: Introduction, frequency reuse, channel assignment strategies, handoff strategies: prioritizing handoffs, Practical handoff considerations.

Interference and System Capacity: Co-channel interference, adjacent channel interference, channel planning, power control for reducing interference, Trunking and GoS, improving coverage and capacity in cellular system: cell splitting, sectoring, microcell zone concept.

Intelligent Cell Concept and Applications: Intelligent Cell, the philosophy of implementing power-delivery intelligent cells: delivering power intelligent, radio capacity, power-delivery intelligent cells: zone-divided cells, intelligent microcell, applications of intelligent Microcell Systems, in-building communication.

Large-Scale Propagation Model: Basic propagation mechanisms, Free space propagation model, Two-ray ground reflection model, Log-distance path loss model, Log-normal shadowing, Fresnel zones, Knife-edge diffraction model, Hata-Okumura model for outdoor propagation.

Small-Scale Propagation Model: Small-Scale multipath propagation, Factors influencing small-scale fading, Doppler shift, Impulse Response Model of a Multipath Channel, Parameters of mobile multipath channels, Types of small-scale fading.

Wireless Networking: Development of Wireless Networks (1G, 2G, 3G), Traffic Routing in Wireless Networks: Circuit Switching, Packet Switching, X.25 Protocol; Wireless Data Services: CDPD, Common Channel Signaling and Network architecture,

Signaling System No. 7 (SS7): Protocol Architecture and Services, Global cellular network interoperability.

Wireless Systems and Standards: AMPS: System overview and Air interface; GSM: System overview, Services and Features, Air interface, GSM channels, Frame structure, Identity numbers, Call established in GSM, IS-95: System overview, Air interface, Channels, Mobility management in IS-95.

Text Books:

1. T S Rappaport : Principles of Wireless Communication
2. Y. Lee : Mobile Cellular Communication
3. Pahlavan and Krishnamurty : Principles of Wireless Network

ICE2221: Signals and Systems
75 Marks, 3 credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' fundamental understanding of signals and systems by integrating time-domain and transform-domain analysis techniques. It enables students to model, analyze, and interpret linear time-invariant systems using tools such as Fourier, Laplace, and z-transforms for both continuous-time and discrete-time signals. The course further supports measurable outcomes by equipping students with the analytical skills required to solve real-world problems in communication, control systems, and signal processing applications.

Course Objective

The objective of this course is to introduce the fundamental concepts and techniques used in both analog and digital signal processing relating to electronic, computer and communication engineering. This course covers linear system techniques especially convolution and transform analysis using Fourier transform, Laplace transform and Z transform to analyze and predict the behavior of linear systems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the basic concepts of signals and systems.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Describe time- and frequency-domain representations of Linear Time Invariant (LTI) systems.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Analyze the LTI systems using Fourier, Laplace, and Z transforms.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Introduction: Definition of signals and systems; Overview of specific systems, Classification of signals, Basic operation on signals, Elementary signals, Properties of systems.

Time-Domain Representation of LTI System: Impulse Response representation of LTI system and its properties, Differential and difference equation representation of LTI systems, Block diagram representations, State variable descriptions for LTI systems.

Fourier Representation of Periodic Signals: Introduction, Fourier representation of four classes of signals, Discrete-Time Fourier Series (DTFS), Fourier Series (FS).

Fourier Representation of Non-periodic Signals: Discrete-time Fourier Transformation (DTFT), Fourier Transformation (FT), Properties of Fourier representations.

Applications of Fourier Representations: Frequency response of LTI systems, FT representation for periodic signals, Convolution and modulation with mixed signal classes, FT representation for Discrete-Time (DT) signals, Sampling, Reconstruction of continuous time signals from samples.

Fourier Method of Signal Processing: DT processing of Continuous-Time (CT) signals, FS representations for finite duration non-periodic signal, DTFS approximation to the Fourier transform, DTFS evaluation algorithm.

Laplace Transform: Laplace Transform (LT), Unilateral LT, Inversion of LT, Solving differential equations with initial conditions, Bilateral LT, Transform analysis of systems.

z-Transform: z-transform, Properties of Region of Convergence (RoC), Properties of z-transform, Inversion of z-transform, Transform analysis of LTI system, Computational structures for implementing DT systems, Unilateral z-transform.

Text Books:

1. Simon Haykin & Barry Van Veen : Signals and Systems

Reference Books:

2. Alan V. Oppenheim, S. Hamid Nawab & Allan S. Willsky : Signals and Systems
3. A. NagoorKani : Signals and Systems

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

ICE 2222: Signals and Systems Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide hands-on experience in analyzing and processing signals using computational tools and simulation techniques. It enables students to implement concepts such as convolution, sampling, and transform methods while visualizing signal behavior in time and frequency domains. The lab further supports measurable outcomes by enhancing practical skills in system modeling, algorithm implementation, and the application of signal processing techniques to real-world engineering problems.

Course Objective

The objective of this lab is to provide practical experience with the generation and processing of basic signals using MATLAB. Experiments of this lab cover fundamental concepts and basic operations on matrices, generation of various signals and sequences, operation on signals and convolution on different types of signals. Fourier, Laplace and z-transforms are also included in the experiments.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Generate different signals and sequences using MATLAB.	PO-1, PO-5	Psychomotor Level 2 (Manipulate)	☐ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)

ICE2231: Analog Communication and Radio-TV Engineering
75 Marks, 3 credits, 3 Hours/week, Lectures: 42, Exam. Time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' understanding of analog communication systems and broadcasting technologies by covering radio wave propagation, modulation and demodulation techniques, transmitters, receivers, and television systems. It enables students to analyze signal transmission, reception, and processing in radio and TV systems, including modern technologies such as HDTV, satellite broadcasting, and CCTV. The course further supports measurable outcomes by equipping students with the ability to evaluate and design communication and broadcasting systems for real-world applications in wireless and multimedia engineering.

Course Objective:

This course aims to introduce the concept and theory of analog communication systems including radio and TV. This course covers radio wave propagation, modulation, demodulation, transmitters and receivers.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Describe the basic concepts of wave propagation, modulation, and demodulation techniques.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☐ Assignment ☐ Participation ☐ Presentation
CO-2	Explain the working principle of different types of radio transmitters and receivers.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Identify the different elements of TV systems.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☒ Presentation
CO-4	Illustrate the	PO-2	Cognitive Level 2	☒ Lecture notes	☒ Class test

	working principles of TV transmitter and receiver, as well as several types of TV including Cable TV, Satellite TV, HDTV, and CCTV.		(Understand)	☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Final exam ☐ Assignment ☐ Participation ☒ Presentation
--	---	--	----------------	--	---

Course Contents

Radio Wave Propagation: Ground wave propagation, Sky wave propagation, Skip distance and Maximum usable frequency, Chapman theory of layer formation, Ionospheric storm.

Modulation: Amplitude modulation, Frequency modulation and Phase modulation, Linear modulation methods, Square law modulation methods.

Demodulation: Amplitude demodulation, Frequency demodulation and Phase demodulation, Classification of detection methods of amplitude demodulation, Square law diode detector, Linear diode detector, Choice of time constant RC in linear diode detector.

Radio Transmitter: Classification of radio transmitters, Constituent stages of amplitude modulation radio transmitter, Carrier frequency requirements of radio transmitter, Master oscillator, Harmonic generation, Single sideband transmission, Frequency shift keying transmitter, Pre and de-emphasis, Armstrong frequency modulation transmitter.

Radio Receiver: Receiver Classification, Elements of Receiver, AM and FM Receivers, SSB Receiver, Noise in Receiver, AGC Circuits, AFC Circuits, Noise Limiters, Receiver sensitivity, Cross-modulation.

TV System: Element of TV System, TV Signal, Interlace Scanning, Bandwidth, Signal Generation by VSB Modulation, Composite Video Signal Analysis, Horizontal and Vertical Sync Details. Video Section, Color Signal Generation, Channel bandwidth.

Color TV: Introduction: Compatibility, three colors theory, Grassman's Law, Luminance, Hue and Saturation, Color Mixing, Color Reproduction Circuits and Color Matrix; Color TV Receiver: Diagram of TV Receiver, Picture Tube, Television Camera Tube, Color Television Display Tube. TV Transmitter, Transmitting and Receiving Antenna.

Modern TV System: HDTV: Standards and Applications, HDTV transmitter and receiver; Cable TV system, Satellite Broadcasting Home TV System, Closed Circuit TV (CCTV): types of CCTV, working principle, application.

ICE2232: Analog Communication and Radio-TV Engineering Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide practical experience in analyzing and implementing analog communication and broadcasting systems. It enables students to perform experiments on modulation, demodulation, transmitter and receiver circuits, and signal analysis using modern instruments and simulation tools. The lab further supports measurable outcomes by enhancing hands-on skills, system-level understanding, and the ability to troubleshoot and optimize real-world radio and television communication systems.

Course Objective

The objective of this lab is to train the students to analyze the modulation and demodulation techniques and understand the basic operation of radio and TV transceiver. This lab also investigates the performance of the techniques by using both the trainer kit and circuit implementation.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/level of learning taxonomy	Delivery methods and activities	Assessment tools

ICE2241: Microwave Communication and Radar
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: EEE2191

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' in-depth understanding of microwave communication systems and radar technologies by integrating concepts of high-frequency signal propagation, microwave components, antennas, and radar principles. It enables students to analyze and design microwave links, evaluate system performance, and understand the operation of advanced devices such as klystrons, magnetrons, and radar systems. The course further supports measurable outcomes by equipping students with the ability to apply theoretical knowledge to modern wireless communication, navigation, and sensing applications.

Course Objective

The focus of this course is to introduce the basic concepts of microwave systems, microwave components, and devices with applications. The course also covers microwave measurement and antenna system components, radar principles, radar types as well as target tracking systems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Describe the basic concept of microwaves, microwave measurements, microwave links, microwave antenna, and Radar.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Explain the construction, operation, and applications of microwave components, devices, and tubes.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Analyze fundamental microwave amplifiers, RF filters, RF oscillators, mixer models, and describe various types of radars and their applications.	PO-1, PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Introduction: Definition of Microwaves, Microwave Frequency Bands, Characteristics of Microwave, Advantages and Disadvantages of Microwaves, General Applications of Microwaves.

Microwave Components and Devices: Introduction, Waveguide Tees, Magic Tee, Hybrid ring (Rat-Race Circuit), Directional coupler, Isolator, Circulator, Maser, Parametric amplifiers.

Microwave Tubes: Introduction, Classifications of Microwave Tubes, Microwave tubes amplifiers: Klystron - Two cavities Klystron, Travelling wave tube (TWT), Microwave tubes oscillators: Reflex klystron, Magnetron.

Microwave Measurements: Introduction, Description of Microwave Bench, Microwave Power Measurements, Microwave Attenuation Measurement, Microwave Frequency Measurement, Microwave SWR Measurement, Impedance Measurement.

Microwave Link: Microwave link and its advantage, Basic microwave communication link, Types of Communication link, Transmitting and Receiving Equipment, Base band repeater, IF repeaters.

Microwave Antenna: Introduction, Characteristics of microwave antennas, Horn antennas, Antennas with parabolic reflectors, Feed antennas, Dielectric antennas, Lens antennas and MIMO antennas.

Basic Concept of Radar: Introduction, Basic principle, Applications of radar, Radar equation and range, Factor influencing maximum range, Effect of noise, Power and frequency used in radar.

Radar Systems: Types of radar; Continuous Wave (CW) radar, Modulated and unmodulated CW radar, Pulse radar, Pulse Doppler and Moving Target Indicator (MTI) radar, Duplexer and radar receiver, Tracking radar systems Indicators and Altimeter.

Text Books:

1. G. S. B. Rao : Microwave and Radar Engineering
2. M. I. Skolnik : Introduction to Radar System

Reference Books:

ICE2252: Software Development Lab
25 Marks, 1 Credits, 2 Hours/week

Prerequisite: CSE1191, ICE2111

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide hands-on experience in software development using C or Java programming language. It enables students to design, implement, test, and debug programs while applying core programming concepts such as control structures, data structures, modular programming, and object-oriented principles. The lab further supports measurable outcomes by enhancing problem-solving ability, coding proficiency, and the development of efficient, reliable, and maintainable software solutions for real-world applications.

Course Objective

The objective of this lab course is to develop a real-life software project using either C or Java programming language.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write and debug programs to solve real-life problem using C or Java programming language.	PO-5	Psychomotor Level 4 (Articulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)
CO-2	Write individual or group report by solving open-ended problems with specific needs and requirements using C or Java programming.	PO-8	Affective Level 4 (Organize)	☐ Programming ☐ Experiment ☒ Open-ended Lab ☐ Demonstration ☒ Practice Lab	☐ Lab Performance ☒ Lab Test ☐ Lab Report ☒ Open-ended Lab Report ☒ Project(Presentation)

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in the final exam, lab tests, assignments, class participation, quizzes and viva voice. Final numeric reward will be the compilation of:

- **Class participation** (10%)
- **Continuous assessment (lab test, assignments, open-ended lab report, quizzes, viva)** (30%)
- **Final exam** (60%)

MATH2221: Discrete Mathematics and Numerical Methods
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' strong analytical and computational foundations by integrating discrete mathematical structures with numerical problem-solving techniques. It enables students to model and solve engineering and computing problems using logic, graph theory, and formal systems, as well as numerical methods for approximation, interpolation, and differential equations. The course further supports measurable outcomes by equipping students with systematic reasoning, algorithmic thinking, and computational skills essential for solving complex real-world problems in engineering and information technology.

Course Objective

The objective of this course is to provide students with the basic concepts of discrete mathematics and numerical methods. In particular, this course includes logic, proofs, sets, relations, functions, counting, and probability, with an emphasis on applications in information and communication engineering. This course also includes solution of a single nonlinear equation, polynomial interpolation, numerical differentiation and integration, solution of initial value and boundary value problems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the set, relation, function, tree, graph.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Analyze logical propositions via truth tables.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Apply numerical methods to obtain approximate solutions to mathematical problems.	PO-1	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

CO-4	Analyze the accuracy of common numerical methods.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
-------------	---	-------------	-----------------------------	---	---

Course Contents

Mathematical Logic: Connectives, Theory of inference for proposition calculus, Predicate calculus, Inference theory of predicate calculus, Method of proof, Mathematical induction.

Sets: Basic concept of set theory, Operation of sets, Ordered pairs and n-tuples.

Relation and Ordering: Relations, Properties of binary relation in a set, Composition of binary relation, Relation matrix and graph of a relation, Partial ordering, Path in relation and di-graph.

Functions: Definition, Composition of function, Inverse function, Binary and array operation.

Graph: Introduction to graph, Graph terminology, Representing graph and graph isomorphism, Paths, Reachability, connectivity, Euler and Hamilton path, Shortest path problems, Graph coloring, Matrix representation of graph.

Trees: Introduction of trees, Application of trees, Tree traversal, Labeling trees, Trees and sorting, Spanning trees, Minimal spanning tree, Undirected trees.

Languages and Grammars: Definition of a formal language, Phrase-structure Grammar-types of Grammars, Derivation tree, Backus-Naur form.

Approximations and Errors: Accuracy and precision, Error definitions, Round-off errors, Truncation errors.

Roots of Equations: The bisection method, the false-position method, the iteration method, the Newton-Raphson method.

Interpolation: Newton's forward and backward formula for interpolation with equal distance, Newton's divided-difference interpolating polynomials, Lagrange interpolating polynomials.

Curve Fitting: Linear regression, Linear curve fitting methods, Least square method, Non-linear curve fitting methods, Polynomial of n th degree, Power function, Exponential function, Polynomial regression.

Numerical Differentiation and Integration: The trapezoidal rule, Simpson's rules, Integration with unequal segments.

Numerical Solutions of Ordinary Differential Equations: Solution by Taylor's series, Picard's method, Euler's method, Modifications and improvements of Euler's methods, Runge-Kutta methods.

ICE2210: Viva-Voce
25 Marks, 1 Credit

Prerequisite: None

Course Type: ☐ Theory ☐ Laboratory work ☐ Project work ☒ Viva Voce

Course Rationale:

This course is designed to assess students' comprehensive understanding of their academic program through oral examination. It enables learners to articulate theoretical knowledge, justify problem-solving approaches, and demonstrate the integration of concepts across multiple disciplines. The course further supports measurable outcomes by enhancing communication skills, critical thinking, and the ability to respond confidently and effectively to professional and technical inquiries.

Course Objective

The objective of the course is to enable students to express verbally their knowledge gained from the theory and lab courses of Second Year in an effective and clear manner.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Assessment tools
CO-1	Communicate and express verbally the knowledge obtained in an effective and clear manner.	PO-9	Affective Level 2 (Respond)	☒ Viva Voce

Third Year, First Semester

ICE3111: Telecommunication Engineering 75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 Hours

Prerequisite: ICE2231

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course provides fundamental knowledge of telecommunication systems, focusing on switching techniques, transmission principles, and network organization essential for modern communication infrastructures. It introduces classical and digital switching systems, including Strowger, crossbar, and electronic switching, enabling students to understand the evolution and operation of telecommunication networks. The course equips students with the ability to analyze and design communication systems by applying principles of signaling, routing, numbering, and traffic engineering. It also develops competence in evaluating network performance through concepts such as grade of service and blocking probability.

Course Objective

The objective of this course is to deliver the fundamentals of switching and networking principles in telecommunication systems. This course includes the working principle and design of early automatic switching systems such as Strowger and crossbar switching and modern electronic switching systems, the concepts of telephone networks, traffic engineering and performance analysis of traffic based on queuing theory.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Describe the fundamentals of switching and networking principles used in telecommunication systems and explain the working principle of automatic switching systems such as Strowger and crossbar switching.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☒ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation
CO-2	Design switching systems based on traffic requirements and explain the concepts of switching hierarchy, routing,	PO-1, PO-3	Cognitive Level 3 (Create)	☒ Lecture notes ☒ Text books ☐ Discussion ☒ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation

	transmission, numbering, charging plans, and signaling techniques.				
CO-3	Identify the basic principles of the modern electronic switching systems and design multistage networks.	PO-1, PO-3	Cognitive Level 4 (Create)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation
CO-4	Analyze telecommunication traffic models and apply the principles of queuing theory in evaluating the performance of telecommunication networks.	PO-2, PO-3	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation

Course Contents

Introduction: Simple telephone communication, Basic switching system, Transmission bridge, Subscriber line circuit, CB cord circuit, Junction working.

Strowger Switching Systems: Relay dial telephone, Signaling tones, Strowger switching component, Step-by-step switching, Design parameters, 100-line switching system, 1000-line blocking exchange, 10,000-line exchange.

Crossbar Switching: Principle of common control, Touch tone dial telephone, Principles of crossbar switching, Crossbar switching configuration, Cross point terminology, Crossbar exchange organization.

Telephone Networks: Subscriber loop systems, Switching hierarchy and routing, Transmission plan, Transmission systems, Numbering plan, Charging plan, Signaling techniques, In-channel signaling, Common channel signaling.

Electronic Space Division Switching: Stored program control, Centralized SPC, Distributed SPC, Software architecture, Application software, Two-stage network, Three-stage network.

Electronic Time Division Switching: Concept of TDM, Basic time division space switching, Basic time division time switching, Time multiplexed space switching.

Computer Controlled Switching System: Introduction, Call processing, Basic steps to process a call, State transition diagram, Switching system organization, Popular digital switching systems.

Traffic Engineering: Network traffic load and parameters, Grade of services and blocking probability, Modeling switching systems, Incoming traffic and service time characterization, Blocking models and loss estimates.

Text Books:

1. ThiagrajanViswanathan : Telecommunication Switching Systems and Networks.
2. P. Gnanasivam : Telecommunication Switching and Networks.

Reference Books:

3. M. T. Hills : Telecommunication Switching Principle.
4. J.C. Bellamy : Digital Telephony.

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

ICE 3121: Digital Signal Processing
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: ICE2221

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' ability to analyze and process digital signals using advanced mathematical and computational techniques. It enables students to understand and apply key concepts such as sampling, discrete Fourier transform, digital filter design, multirate signal processing, and adaptive filtering for real-world signal analysis. The course further supports measurable outcomes by equipping students with the skills to design and evaluate efficient signal processing systems for applications in communication, audio, image processing, and control systems.

Course Objective

The objective of this course is to introduce the theory of digital signal processing (DSP). The course concentrates on digital signal analysis using different transformation methods and design digital filters using different techniques. This course also describes conversion, optimization and estimation of digital signals.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Describe the basic concepts of the sampling and reconstruction of signals, discrete Fourier transform (DFT) and computation of DFT.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Analysis and design of FIR, IIR filter and its application.	PO-2, PO-3	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Explain various methods of sampling-rate conversion, power spectrum estimation and design optimum filters.	PO-1, PO-3	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Sampling and Reconstruction of Signals: Ideal sampling and reconstruction of continuous-time signals, Discrete-time processing of continuous-time signals, Analog-to-digital converters, Analysis of quantization errors, Digital-to-analog converters, Sampling and interpolation of discrete-time signals.

Discrete Fourier Transform: Frequency domain sampling, Discrete Fourier Transform (DFT), Properties of the DFT, Linear filtering and frequency analysis of signals using DFT.

Efficient Computation of DFT: Fast Fourier Transform (FFT) algorithms, Application of FFT algorithms, Linear filtering approach to the computation of DFT, Quantization effects in the computation of DFT.

Digital Filter: Causality, Symmetric and antisymmetric Finite Impulse Response (FIR) filters, Design of linear phase FIR filters using windows, FIR differentiator, Hilbert transformer, Design of Infinite Impulse Response (IIR) by impulse invariance.

Multirate Signal Processing: Decimation by a Factor D, Interpolation by a Factor I, Sampling Rate Conversion by a Rational Factor I/D, Direct form FIR Filter Structure, Polyphase FIR Structure, Interchange of filters, Multistage Implementation of SRC, Applications of Multirate Signal Processing.

Optimum Linear Filters: Wiener Filters for Filtering and Prediction, FIR Wiener Filter, Orthogonality Principle in Linear Mean-Square Estimation, IIR Wiener Filter, Discrete Kalman Filter.

Spectrum Estimation: Nonparametric Methods: The Periodogram Method, Bartlett's Method, Welch's Method, Parametric Methods: Autoregressive Method, Moving Average Method, Autoregressive Moving Average Method.

Adaptive Filtering: Introduction, FIR Adaptive Filters, Adaptive Recursive Filters, Recursive Least Squares: Exponentially Weighted RLS, Sliding Window RLS (WRLS).

ICE3122: Digital Signal Processing Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: ICE2222

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide hands-on experience in implementing digital signal processing algorithms using simulation tools and programming environments. It enables students to perform practical experiments on sampling, FFT, digital filter design, and adaptive filtering while visualizing signals in time and frequency domains. The lab further supports measurable outcomes by enhancing computational skills, algorithm development, and the ability to apply DSP techniques to solve real-world engineering problems.

Course Objective

The objective of this lab is to perform different operations on digital signal including decimation and interpolation. It also covers different transformation of signals including DFT and FFT.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Perform decimation and interpolation processes on discrete-time signals.	PO-1, PO-5	Psychomotor Level 2 (Manipulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)

ICE3131: Operating Systems
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' understanding of the fundamental concepts and internal mechanisms of operating systems. It enables students to analyze and design system-level solutions involving process management, memory management, scheduling, synchronization, and security for efficient and reliable computing. The course further supports measurable outcomes by equipping students with the ability to evaluate and optimize operating system performance in real-world and multi-core computing environments.

Course Objective

This course focus on understanding how an OS manages hardware resources (CPU, memory, I/O, files) to provide an abstracted, efficient, and convenient interface for applications and users, covering core concepts like processes, threads, scheduling, synchronization, deadlocks, virtual memory, file systems, security, and practical skills in Linux/system calls, leading to knowledge of OS design principles and the ability to implement OS-level solutions.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	To explain responsibilities of contemporary operating system; the structure of operating systems,	PO-1	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	To explain operating system design and its impact on application system design and performance.	PO-1	Cognitive Level 5 (Evaluating)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	To analyze and evaluate operating system features	PO-1	Cognitive Level 5 (Evaluating)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation

Course Contents

Introduction: Introduction to operating system (OS), types of OS, OS organization, architecture and structure, process and storage management, protection and security.

Process and Threads: Processes concept, process scheduling, operations on processes, interprocess communication, thread concept, multicore programming, multithreading models.

Process Synchronization: Race condition, critical section problem, critical region, synchronization hardware, semaphores, classical problems of synchronization.

CPU Scheduling: Scheduling criteria, preemptive & non-preemptive scheduling, scheduling algorithms, multiple-processor scheduling, soft and hard real-time systems.

Deadlocks: System model, deadlock characterization, methods for handling deadlocks, deadlock prevention, avoidance and detection, recovery from deadlock.

Memory Management: Background, swapping, memory allocation, segmentation, paging, demand paging, page replacement, allocation of frames.

Storage Management: File concept, access methods, file system structure, directory implementation, allocation methods, free-space management, I/O systems, I/O hardware, application I/O interface, kernel I/O subsystem.

Protection and Security: Goal, principles and domain of protection, access matrix, security problems, program threats, system threats, authentication.

ICE3132: Operating Systems Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide practical experience in implementing core operating system concepts such as process scheduling, synchronization, memory management, and file systems. It enables students to develop and test system-level programs using appropriate tools and programming techniques, enhancing their problem-solving and debugging skills. The lab further supports measurable outcomes by fostering hands-on competence in analyzing system performance and addressing real-world challenges related to resource management and security.

Course Objective

This Lab course focus on bridging theory with practice, aiming to teach students to implement core OS concepts like process/thread management, CPU scheduling, memory allocation, file systems, and synchronization using system calls in a Linux/Unix environment, enabling them to understand how OS functions affect performance and build more efficient applications.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	To compare the performance of various CPU Scheduling Algorithms.	PO-1	Cognitive Level 3 (Apply)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☐ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☐ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)

ICE3141: Antenna Engineering
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: EEE2191

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

The course *Antenna Engineering* provides students with a comprehensive understanding of antenna theory, design, and performance evaluation, which are fundamental to modern wireless communication systems. It develops students' knowledge of radiation mechanisms, antenna parameters, and key theorems, enabling rigorous analysis of various antenna types, including dipole, loop, and array configurations. The course also introduces advanced topics such as microstrip and smart antennas, along with practical measurement techniques. By integrating theoretical principles with design and analysis skills, the course prepares students for advanced study and professional practice in telecommunications, RF systems, and related engineering fields.

Course Objective

The objective of this course is to introduce the fundamental principles of antenna theory and apply them to the analysis, design, and measurement of antenna systems. This course also covers a comprehensive theory of various types of antennas and their radiation characteristics, antenna arrays, and experimental measurement techniques.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the fundamentals of antennas, including their types, radiating mechanisms, and parameters.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Describe the antenna theorems of duality, reciprocity, reaction, maximum power transfer, and their applications.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☐ Assignment ☐ Participation ☐ Presentation
CO-3	Design and analyze several types of antennas, including microstrip antenna, smart antenna, antenna arrays, thin linear antenna, and loop antenna, and	PO-2, PO-3	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☐ Assignment ☐ Participation ☒ Presentation

	apply various antenna measurement methods to assess the performance of the antenna.				
--	---	--	--	--	--

Course Contents

Antennas: Introduction, Types of Antennas, Radiation mechanism: Single Wire, Two-Wires and Dipole Antennas, Current distribution on a thin wire antenna, Historical Advancement.

Fundamental Parameters of Antenna: Radiation patterns, Patterns in principal planes, Main lobe and Side lobes, Radiation intensity, Radiation resistance, Input impedance, Directivity, Gain, Antenna efficiency, Beamwidths, Beam area, Beam efficiency, Bandwidth, Front to back ratio, Polarization, Antenna apertures, Effective height.

Antenna Theorems: Reciprocity theorem and its applications, Reaction theorem, Duality theorem, Maximum power transfer theorem and its importance in antenna measurements.

Electric Dipoles and Thin Linear Antennas: Short electric dipole, Field components of a short dipole, Radiation resistance of short electric dipole, Thin linear antenna, Radiated power and Radiation resistance of $\lambda/2$ antenna.

Loop and Array Antennas: Introduction of loop antenna, Design consideration of loop antenna, Loop antenna parameters, Electrically small and electrically large loop antenna, Ferrite loop antenna; Array antenna configuration, two element array, N-element linear array: Uniform amplitude, uniform spacing and Nonuniform amplitude, uniform spacing, Directivity, Binomial array, Planar array.

Microstrip and Smart Antennas: Rectangular and Circular Patch, Quality Factor, Bandwidth and Efficiency, Input Impedance, Circular Polarization, Arrays and Feed Networks; Smart Antenna Analogy, Benefits and Drawbacks, Smart-Antenna Systems, Antenna Beam forming, Smart-Antenna System Design, Simulation and Results.

Antenna Modeling and Measurements: Maxwell's equations; Computational Electromagnetics: high-frequency methods and full-wave simulation methods; Methods of Antenna Modeling: Basic theory, Methods of Moments, FEM, FDTD method; Antenna measurements: Antenna ranges, Radiation Pattern measurements, Gain and Directivity measurements, Impedance and Polarization measurements.

Advance Antenna Applications: Antenna for 5G/6G applications, Antenna for Medical Applications, Implantable Antennas (Radiators) for Localized Cancer Treatment, Antenna for medical imaging, Heating and Biotelemetry, Antenna design for THz applications, Basic concept of machine learning and deep learning for antenna design.

ICE3142: Antenna Engineering Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide hands-on experience in the analysis, design, and measurement of various antenna systems. It enables students to investigate radiation characteristics, antenna parameters, and array configurations while applying theoretical concepts through simulation tools and practical measurements. The lab further supports measurable outcomes by enhancing skills in antenna modeling, performance evaluation, and the application of advanced antenna technologies for modern communication systems such as 5G/6G, medical, and high-frequency applications.

Course Objective

The objective of this lab is to introduce experimental measurement of various types of antennas using antenna trainer kit. This lab also enables the students to design antennas and analyze their performance using software tool.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Analyze the radiation characteristics of various types of antennas such as simple dipole, folded dipole, Yagi-Uda, Loop antenna, and Slot antenna using antenna trainer kit . ICE3151: Software Engineering
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: CSE1191, ICE2111

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course provides a structured framework for transforming complex business requirements into reliable, high-quality technical solutions through SDLC. By studying various process models like Waterfall, Spiral, and Agile, students learn to select the most effective methodology based on project scale, risk factors, and the need for flexibility. Ultimately, the course ensures that software is not just functional but also maintainable, secure, and compliant with global quality standards.

Course Objective:

The main objectives of this course are to provide students the basic concepts of information system analysis, design and implementation. This course also provides the details about how to use the knowledge of software engineering to develop a software project.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Identify the key aspects of the information system development and software engineering.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☐ Assignment ☐ Participation ☐ Presentation
CO-2	Analyze and design an information systems and software products.	PO-2, PO-3	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Build solutions to real-world problem using the concept of information system and software engineering.	PO-4	Cognitive Level 4 (Create)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Introduction: System Concepts, characteristics of a system, Elements of a system, Types of systems, Types of information systems, Information systems environments, System Development Life Cycle, Role of system analyst.

Information Gathering: Categories of information, Information gathering tools: Review of literature, Procedures and forms, On-site observation, Interviews and questionnaires, Types of interviews and questionnaires.

Feasibility Study: System performance definition, Feasibility study, Feasibility Considerations, Steps in feasibility analysis, Feasibility report, Oral presentation, Data analysis, Cost/benefit analysis: Cost and benefit categories, Procedure for cost/benefit determination, Classification of costs and benefits, Cost/benefit evaluation methods.

System Design and Implementation: The process and stages of system design. Input/output and forms design, File organization and database design, System Testing and Quality Assurance, Implementation and software maintenance, Hardware/software selection, Project scheduling and Software, Security, Disaster/recovery and Ethics in System Development.

Software Process Models: Software process, Software process models, Linear sequential model, Prototyping models, Waterfall model, RAD, Incremental model, Spiral model, Agility and agile process model.

Software Quality Management: Concept of quality, Quality factors, Achieving software quality, Elements of software quality assurance, SQA Tasks, Goals, and Metrics, Formal approaches to SQA, Statistical software quality assurance, Software reliability, The ISO 9000 quality standards, The SQA plan.

Software Testing and Maintenance: Different testing philosophy and methods, Software testing fundamentals, Internal and external views of testing, White-Box testing, Black-Box testing, Model-Based testing, Patterns for software testing, Testing object-oriented applications, Testing web applications.

Software Projects and Risk Management: Project management concepts: People, Product and process. Product metrics, Process and project metrics, Estimation for software project, Risk identification, Risk projection, Risk refinement, Risk mitigation, Monitoring, and management.

ICE3152: Software Engineering Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This lab transforms theoretical lifecycle concepts into practical skills by requiring the systematic creation of professional deliverables documents, UML diagrams, and test cases. It provides a collaborative environment where students apply various process models, such as Agile or Waterfall, to manage the complexities of team-based development and version control. Ultimately, this hands-on experience ensures that students can move beyond writing isolated scripts to engineering cohesive, maintainable, and industry-standard software systems.

Course Objective

The objective of this lab course is to develop software-based project utilizing the standard practices of information system analysis and software engineering.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Analyze and design information system and/or software based project to solve real-world problems.	PO-4, PO-5	Psychomotor Level 4 (Articulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☐ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☐ Lab Report ☒ Open-ended Lab Report ☐ Project(Presentation)
CO-2	Write individual or group report by solving open-ended software projects with specific needs and requirements.	PO-8	Affective Level 4 (Organize)	☒ Programming ☒ Experiment ☒ Open-ended Lab ☐ Demonstration ☒ Practice Lab	☐ Lab Performance ☐ Lab Test ☐ Lab Report ☒ Open-ended Lab Report ☐ Project(Presentation)

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in the final exam, lab tests, assignments, class participation, quizzes and viva voce. Final numeric reward will be the compilation of:

- **Class participation (10%)**
- **Continuous assessment (lab test, assignments, open-ended lab report, quizzes, viva) (30%)**
- **Final exam (60%)**

Third Year, Second Semester

ICE3211: Database Management Systems

75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 Hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course provides fundamental knowledge of database systems, emphasizing data modeling, database design, and efficient data management essential for modern information systems. It introduces core concepts such as Entity-Relationship modeling, relational databases, normalization, and structured query language (SQL), enabling students to design and implement robust database solutions. The course develops students' ability to analyze, design, and manage databases by applying principles of integrity constraints, security, transaction management, concurrency control, and recovery mechanisms. It also equips students with practical skills in querying and maintaining databases using SQL and related technologies.

Course Objective

The objective of this course is to present the design and development of database applications, organization of different types of data in database and basic architecture of entity-relationship (ER) diagram. This course also includes topics on database management using Structured Query Language (SQL), transaction management, concurrency control, recovery of data and development of real-life database applications.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Identify different types of data in a database and design database management system applications.	PO-1, PO-3	Cognitive Level 4 (Create)	☒ Lecture notes ☒ Text books ☐ Discussion ☒ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation
CO-2	Explain the basic architecture of entity-relationship (ER) diagram and describe integrity and security issues of database management systems.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☒ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation

CO-3	Describe the basics of Structured Query Language (SQL) for handling databases and illustrate the concepts of transaction management, concurrency control and recovery systems for managing real-life database applications.	PO-1, PO-3	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☒ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation
-------------	---	-------------------	--------------------------------	---	--

Course Contents

Introduction: Overview, File systems versus database systems, View of data, Data models, Database users and administrators, Transaction management, Database system structure, Applications.

The Entity-Relationship Diagram: Basic concept, Design issue, Mapping constraints, Keys, E-R diagram, Weak entity sets, Extended E-R features, Design of an E-R database schema, Reduction of an E-R schema to table.

Relational Database System: Structure of relational databases, Relational algebra, Extended relational-algebra operations, Modification of the database, Views, Normalization.

Integrity and Security: Domain constraints, Referential integrity, Assertions, Triggers, Security and authorization, Authorization in SQL, Encryption and authentication.

Structured Query Language: Data definition, Basic structure of SQL query, Set operation, Nested queries, Aggregate operations, Null values, Complex queries, Embedded SQL, Cursors, Dynamic SQL, ODBC and JDBC, Active database.

Transaction: ACID properties, Transaction state diagram, Implementation of atomicity and durability, Concurrent executions, Serializability, Recoverability, Implementation in isolation, Transaction definition in SQL, Testing for serializability.

Concurrency Control: Lock-based protocols, Timestamp-based protocols, Multiple-granularity, Deadlock handling, Insert and delete operations.

Recovery System: Failure classification, Storage structure, Recovery and atomicity, Recovery with concurrent transactions.

Text Books:

1. A. Silberschatz, H. F. : Database Systems Concept.
Korth and S. Sudarshan

Reference Books:

2. Joseph A. Vasta : Understanding Database Management Systems.
3. James Martin : Principles of Database Management.
4. Jeffrey D. Ullman : Principles of Database Systems.

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

COs	Assessment Tools (Total 100%)

ICE3212: Database Management Systems Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course provides hands-on experience in designing, implementing, and managing relational databases, reinforcing the theoretical concepts learned in database systems. It enables students to apply data modeling techniques and translate them into practical database schemas using Structured Query Language (SQL). The course develops practical skills in data retrieval, manipulation, and maintenance through SQL queries, as well as in enforcing data integrity and security constraints. Students also gain experience in implementing advanced database features such as stored procedures and triggers for efficient and automated database operations.

Course Objective

The objective of this lab is to provide the students with the practical experiences on the concepts of Database Management Systems. This lab includes the design of relational databases and their implementation using Structured Query Language (SQL), retrieval of data using queries, data manipulation, enforcing data-integrity constraints, implementation of stored procedures and triggers.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write and debug computer programs to solve practical problems with SQL using IDE.	PO-5	Psychomotor Level 4 (Articulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)
CO-2	Write individual or group report by solving open-ended problems with specific needs and requirements using SQL.	PO-8	Affective Level 4 (Organize)	☐ Programming ☐ Experiment ☒ Open-ended Lab ☐ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☐ Lab Report ☒ Open-ended Lab Report ☐ Project(Presentation)

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in the final exam, lab tests, assignments, class participation, quizzes and viva voice. Final numeric reward will be the compilation of:

- **Class participation (10%)**
- **Continuous assessment (lab test, assignments, open-ended lab report, quizzes, viva) (30%)**
- **Final exam (60%)**

COs	Assessment tools (Total 100%)

ICE3221: Digital Communication
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: ICE2231

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

The course “*Digital Communication*” is designed to equip students with modern communication systems, focusing on fundamental concepts such as Sampling Theorem, Channel Capacity, and Maximum Likelihood Estimation. The course enables students to understand and evaluate digital modulation techniques, signal detection and estimation methods, and error control coding schemes, which are critical for efficient and reliable data transmission. Concepts such as intersymbol interference, eye patterns, and regenerative repeaters provide practical insights into system design and performance evaluation. It prepares them for advanced studies in telecommunications, wireless communication, and signal processing, where the design and optimization of reliable communication systems are of paramount importance.

Course Objective

The objective of this course is to provide fundamental knowledge about digital communication systems. This course covers signal detection, estimation, and sampling processes. This course also describes various digital modulation techniques and waveform coding techniques in the presence of noise and other interferences.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the fundamental concepts of digital communication systems, signal detection and estimation, and sampling process.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Explain and analyze the impact and performance of different digital modulation techniques.	PO-1, PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☐ Assignment ☐ Participation ☒ Presentation
CO-3	Analyze error control coding to achieve error detection and correction	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books	☒ Class test ☒ Final exam

	in digital transmission systems.			☐ Discussion ☐ Audio/video ☐ Web material	☐ Assignment ☐ Participation ☒ Presentation
--	----------------------------------	--	--	--	---

Course Contents

Fundamentals of Digital Communication: Sources and signals, Basic signal processing operation in digital communication, Channels for digital communication, Uncertainty, Information, and Entropy, Source coding theorem, Discrete memoryless channels, Mutual information, Channel capacity, Channel coding theorem, Channel capacity theorem.

Signal Detection: Model of digital communication system, Gram-Schmidt orthogonalization procedure, Geometric interpretation of signal, Detection of signals in noise, Probability of error, Correlation receiver, Matched filter receiver.

Signal Estimation: Concept and criteria, Maximum likelihood estimation, Wiener filters for waveform estimation, Linear prediction, Linear predictive vocoders, Adaptive filters.

Sampling Process: Sampling theorem, Quadrature sampling of band-pass signals, Reconstruction of a message process from its samples, Signal distortion in sampling, Practical aspects of sampling and signal recovery, Pulse amplitude modulation.

Digital Modulation Techniques: Digital modulation, Factors that influence the choice of digital modulation, Linear modulation: BPSK, DPSK, QPSK, $\pi/4$ QPSK, Offset QPSK, QAM; M-ary modulation techniques, Spread-Spectrum Modulation: Direct Sequence Spread Spectrum, Frequency-Hop Spread Spectrum.

Baseband Pulse and Digital Signaling: Pulse Code Modulation (PCM), Quantization of Noise in PCM, Differential PCM (DPCM), Delta Modulation (DM), Adaptive Delta Modulation Pulse code modulation (ADMPCM), Channel noise, Quantization noise, SNR, Robust quantization.

Multiplexing: Time Division Multiplexing (TDM), Intersymbol interference, Correlation coding, Eye pattern, Pulse Amplitude Modulation (PAM), Power spectra of discrete PAM signals, Baseband M-ary PAM systems, Regenerative Repeater.

Error Control Coding: Rationale for coding and types of codes, Discrete memoryless channels, Linear block codes, Cyclic codes, Maximum likelihood decoding of convolution codes, Distance properties of convolution codes, Trellis codes.

Text Books:

1. Simon Haykin : Digital Communication Systems

Reference Books:

2. Kennedy-Davice : Electronic Communication Systems
3. Theodore S. Rappaport : Wireless Communications: Principles & Practice

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

ICE 3222: Digital Communication Lab

37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None**Course Type:** ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce**Course Rationale:**

The course “*Digital Communication Lab*” is designed to complement theoretical knowledge by providing hands-on experience with practical digital communication systems. Through experimental learning, students develop practical skills in signal generation, transmission, and analysis, as well as gain insights into line coding techniques and system performance. The lab enhances students’ ability to interpret experimental results, troubleshoot systems, and prepare technical reports. Overall, this course bridges the gap between theory and practice, strengthening students’ technical competence and preparing them for real-world applications.

Course Objective:

The objective of this lab is to achieve practical experience of different techniques of digital communication system by using digital communication kits such as ASK, FSK, and PSK, etc. This lab also covers experiments on different line coding techniques.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Conduct different experiments to understand the operations of different digital modulation techniques using digital communication kit.	PO-2, PO-5	Psychomotor Level 3 (Manipulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)
CO-2	Write individual or group report by analyzing different line coding techniques using digital communication kit.	PO-2, PO-8	Psychomotor Level 3 (Perfect)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)

Teaching-Learning Strategies:

Teaching strategies for this course consists of Lab demonstration as well as assignments. The lecture material includes lab manual that consists of experiments and assignments on different types of digital modulation and line coding techniques.

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in the final exam, lab tests, assignments, class participation, quizzes and viva voice. Final numeric reward will be the compilation of:

- **Class participation** (10%)
- **Continuous assessment (lab test, assignments, quizzes, viva)** (30%)
- **Final exam** (60%)

ICE3231: Artificial Intelligence and Neural Computing
75 Marks, 3 credits, 3 Hours/week, Lectures: 42, Exam. Time: 3 hours

Prerequisite: MATH2221, STAT1211

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' ability to analyze, design, and implement intelligent systems by integrating foundational concepts of Artificial Intelligence, knowledge representation, and neural computing. It equips students with practical skills in Python-based AI tools and machine learning techniques to solve real-world engineering problems using reasoning, search strategies, and data-driven approaches.

Course Objective

This course provides artificial intelligence and neural computing concepts that can be applied in different modern technological fields. The goal is to describe the basic methods of representing knowledge in suitable forms for computer processing using logic programming languages and developing an intelligent system by automated reasoning. The course also introduces neural computing technique as an alternative knowledge processing paradigm using different machine learning algorithms.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Identify problems that can be represented and expressed in terms of logic and search problems.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Solve problems using logic programming languages and automated reasoning approach.	PO-3	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Identify problems that can be expressed in terms of neural networks, and to select an appropriate learning methodology for the problem area.	PO-1, PO-2	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Introduction: Definition, goal and application of AI, Conventional and neural computation, Intelligent agent, Agent environment, Turing test, Game playing, Natural language processing, Expert system, Genetic algorithm, Robotics and Fuzzy logic.

Knowledge Acquisition and Representation: Definition and importance of knowledge, Knowledge-based agent, Representation of knowledge, Knowledge acquisition, Propositional and predicate logic, CNF, DNF, Well-formed formula (WFF), Inference rules, Resolution.

Python Programming for AI: Introduction to Python for AI- Variables & Data Types, Operators (arithmetic, logical, comparison), Control Structures (if-else, loops), Functions. Python Data Structures- Lists, Tuples, Dictionaries, Sets, List Comprehension. Introduction to python package- NumPy (arrays), Pandas (dataframes), **SymPy**. Introduction to Machine Learning using scikit-learn package.

Reasoning and Problem Solving: Reasoning with uncertainty, Probabilistic reasoning, Bayes rule, Searching of state space, Breadth first, Depth-first and related types of search, Heuristic search technique, Hill climbing algorithm, Logic of non-monotonic reasoning, Inductive and deductive reasoning, Forward and backward chaining.

Neural Networks: Definition, Benefit, Human brain, Models of neuron, Types of activation function, Network architectures, Knowledge representation, Artificial intelligence and neural networks.

Learning Process: Error-correction learning, Memory based learning, Hebbian learning, Competitive learning, Boltzmann learning, Statistical learning theory.

Perceptron: Perceptron, Perceptron convergence theorem, Multilayer perceptron, Back-propagation algorithm, XOR problem, Decision rule, Differentiation, Generalization, Cross-validation, Network pruning technique.

Basic Concept of Deep Neural Network: Fundamentals of deep learning, convolutional neural network (CNN) and tensorflow, RCNN, Representation learning and generative learning, Deep learning applications for reinforcement learning and NLP.

Text Books:

1. Simon Haykin : Neural Networks A Comprehensive Foundation
2. Dan W. Patterson : Introduction to Artificial Intelligence and Expert System
3. Eric Matthes : Python Crash Course: A Hands-On, Project-Based Introduction to Programming
4. Charu C. Aggarwal : Neural Networks and Deep Learning: A Textbook

Reference Books:

ICE3232: Artificial Intelligence and Neural Computing Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide hands-on experience in implementing Artificial Intelligence and neural computing techniques, reinforcing theoretical concepts through practical experimentation. It enables students to develop, test, and evaluate AI models using programming tools and frameworks, enhancing their skills in problem-solving, data analysis, and intelligent system design. The course further supports measurable outcomes by fostering innovation, teamwork, and the ability to apply AI solutions to real-world engineering and research challenges.

Course Objective

The objective of this lab course is to provide the basic concepts to solve the AI problems. The course also implements the neural computing techniques using machine-learning algorithms for solving real-world problems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write programs on AI and neural computing.	PO-5	Psychomotor Level 4 (Articulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)
CO-2	Write individual or group report by solving open-ended AI and neural computing problems using prolog and other programming languages	PO-8	Affective Level 4 (Organize)	☐ Programming ☐ Experiment ☒ Open-ended Lab ☐ Demonstration ☒ Practice Lab	☐ Lab Performance ☒ Lab Test ☐ Lab Report ☒ Open-ended Lab Report ☐ Project(Presentation)

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in the final exam, lab tests, assignments, class participation, quizzes and viva voce. Final numeric reward will be the compilation of:

- **Class participation (10%)**
- **Continuous assessment (lab test, assignments, open-ended lab report, quizzes, viva) (30%)**

ICE3251: Satellite Communication
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: ICE3141

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to provide a strong foundation in satellite communication systems. It introduces the fundamental principles governing satellite orbits, link budget analysis, polarization effects, and the design of space and earth segments. Additionally, it develops analytical skills for evaluating multiple access techniques (FDMA, TDMA, CDMA) and specialized services such as GPS, VSATs, Iridium, and Orbcomm. Finally, the course prepares students to analyze and evaluate satellite communication systems for real-world ICT applications, supporting careers in satellite, wireless, and space technologies.

Course Objective

The objective of this course is to introduce the basic concepts of satellite communication including satellite positioning in orbit, different types of satellite and their applications, modulation schemes and multiple access techniques used for satellite, antennas for satellite and link power budget calculation.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the Kepler's laws, satellite orbits, launching orbits, orbital perturbations and analyze antenna look angles and limits of visibility.	PO-1, PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Explain antenna polarization and depolarization, transmission losses and analyze the link-power budget.	PO-1, PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Explain the attitude control, station keeping, power supply, receive-only home TV systems and transmit-receive earth stations.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

CO-4	Describe the modulation formats, multiple access techniques, satellite mobile services and global positioning satellite system.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
-------------	---	-------------	------------------------------	---	---

Course Contents

Introduction to Satellite Communication: Basic concepts of Satellite Communications, Kepler's First Law, Kepler's Second Law, Kepler's Third Law, Definitions of Terms for Earth-Orbiting Satellites, Orbital Elements, Apogee and Perigee Heights, Orbit Perturbations, inclined orbits.

The Geostationary Orbit: Introduction, Antenna Look Angles, the Polar Mount Antenna, Limits of Visibility, Near Geostationary Orbits, Earth Eclipse of Satellite, Launching Orbits.

Polarization: Introduction, Antenna Polarization, Polarization of Satellite Signals, Cross Polarization, Discrimination, Ionospheric Depolarization, Rain Depolarization, Ice Depolarization.

The Space Link: Introduction, Equivalent Isotropic Radiated Power, Transmission Losses, The Link-Power Budget Equation, System Noise, Carrier-to-Noise Ratio, The Uplink, Downlink, Combined Uplink and Downlink C/N Ratio, Inter-Satellite links.

The Space Segment: Introduction, the Power Supply, Attitude Control, Station Keeping, Thermal Control, Transponders, the Antenna Subsystem

The Earth Segment: Introduction, Receive-Only Home TV Systems, Master Antenna TV System, Community Antenna TV System, Transmit-Receive Earth Stations.

Satellite Access: Introduction, Single Access, Preassigned FDMA, Demand Assigned FDMA, Spade System, TDMA, Preassigned TDMA, Demand-assigned TDMA, Satellite-Switched TDMA, Code Division Multiple Access.

Satellite Mobile and Specialized Services: Introduction, Satellite Mobile Services, VSATs, Radarsat, Global Positioning Satellite System (GPS), Orbcomm, Iridium.

Text Books:

1. Dennis Roddy : Satellite Communications

Reference Books:

2. Tri T. Ha : Digital Satellite Communication
3. Sudhir K Pand : Handbook of Satellite Communication
4. Robert A. Nelson : Satellite Communication System Engineering

Assessment and Evaluation Strategy:

Students will be assessed on basis of their overall performance in the final examination, class tests/assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/assignments/quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

BBA3291: Innovation and Entrepreneurship for IT Business
50 Marks, 2 Credits, 2 Hours/week, Lectures: 28, Exam time: 2 hours

Prerequisite: ACCO2111

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' innovative thinking and entrepreneurial competencies for creating and managing IT-based business ventures. It enables students to identify opportunities, develop viable business models, and apply startup methodologies such as lean startup and business model canvas to transform ideas into sustainable enterprises. The course further supports measurable outcomes by equipping students with practical skills in market analysis, financial planning, and strategic decision-making essential for success in the evolving global digital economy.

Course Objective

The objective of this course is to introduce the fundamental concepts of entrepreneurship and innovation, particularly in the context of information technology. It aims to develop students' ability to identify opportunities and transform innovative ideas into potential business ventures through basic knowledge of business models, market analysis, and entrepreneurial skills.

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the fundamental concepts of entrepreneurship, innovation, and opportunity recognition, including creativity, types of entrepreneurships, and the role of entrepreneurs in economic development.	PO-12	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Apply techniques for identifying technology-based business opportunities and develop innovative ideas through creativity and opportunity	PO-3, PO-12	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

	recognition methods.				
CO-3	Develop a basic startup plan by designing a suitable business model, value proposition, and market feasibility analysis using tools such as the Business Model Canvas and lean startup approach.	PO-10, PO-12	Psychomotor Level 3 (Manipulate)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-4	Analyze financial, managerial, ethical, and regulatory aspects of launching and managing an IT-based venture.	PO-6, PO-7, PO-10, PO-12	Affective Level 4 (Organize)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Innovation and Opportunity Recognition: Creativity and idea generation, Opportunity identification techniques, Technology-based innovation, Case studies of successful startups.

Introduction to Entrepreneurship: Meaning and importance of entrepreneurship, Role of entrepreneurs in economic development, Types of entrepreneurs, Characteristics of successful entrepreneurs.

Business Model and Startup Development: From ideas to reality, Business model concepts, Value proposition and customer segments, Business Model Canvas, Lean startup approach.

Market and Feasibility Analysis: Market research basics, Competitive analysis, Feasibility study, Risk assessment.

Financing and Managing a Startup: Startup funding sources, Venture capital and angel investors, Financial planning for startups, Intellectual property basics.

Entrepreneurial Skills and Ethics: Leadership and teamwork, Entrepreneurial mindset, Social entrepreneurship, Ethics and sustainability in business.

The rewards and challenges of entrepreneurship: Driving forces behind small business, ethics and social responsibility, creativity and innovation.

Advanced Topics: Business law and government regulation, Strategic plan and risk management, Global aspects of entrepreneurship, Building a new venture team and planning for the next generation.

Text Books:	
Peter F. Drucker	: Innovation and Entrepreneurship, Harper Business.
Eric Ries	: The Lean Startup, Crown Currency.

ICE3210: Viva-Voce
25 Marks, 1 Credit

Prerequisite:

Course Type: ☐ Theory ☐ Laboratory work ☐ Project work ☒ Viva Voce

Course Rationale:

This course is designed to assess students' comprehensive understanding of their academic program through oral examination. It enables learners to articulate theoretical knowledge, justify problem-solving approaches, and demonstrate the integration of concepts across multiple disciplines. The course further supports measurable outcomes by enhancing communication skills, critical thinking, and the ability to respond confidently and effectively to professional and technical inquiries.

Course Objective

The objective of the course is to enable students to express verbally their knowledge gained from the theory and lab courses of Third Year in an effective and clear manner.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Assessment tools
CO-1	Communicate and express verbally the knowledge obtained in an effective and clear manner.	PO-9	Affective Level 2 (Respond)	☒ Viva Voce

Fourth Year, First Semester

ICE4111: Optical Fiber Communication

75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: ICE2231

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is important because optical fiber technology is the backbone of high-speed internet, cloud computing, submarine cables, and modern telecommunication networks. It teaches students about fiber characteristics, signal loss, dispersion, optical sources, detectors, and network design. The course addresses problems related to bandwidth limitations, signal degradation, and long-distance data transmission. It is highly relevant today because industries are rapidly expanding fiber-to-the-home services, data centers, 5G/6G networks, and smart city infrastructure, increasing the demand for engineers skilled in optical communication systems.

Course Objective

The objective of this course is to introduce the fundamental concepts of optical fiber communication systems and various optical devices. The course also emphasizes on different optical transmission characteristics as well as optical networking systems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the basic concept of optical fiber communication and propagation of light through optical fiber.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Describe different types of optical fiber, propagation modes and fiber characteristics.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Analyze the transmission characteristics to realize the optical	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books	☒ Class test ☒ Final exam

	propagation using various sources, detectors and optical network.			☐ Discussion ☐ Audio/video ☒ Web material	☒ Assignment ☐ Participation ☐ Presentation
--	---	--	--	---	---

Course Contents

Concept of Optical Fiber Communication: Introduction, Advantages, Disadvantages of OFC, General system, Types of Optical fiber, Light propagation principle in optical fiber, Optical fiber cables, Optical windows, Applications of Optical Fiber Communication.

Optical Fiber Waveguides: Ray theory transmission, Electromagnetic mode theory for optical propagation, Cylindrical fiber: Step index fibers, Graded index fibers; Single mode fibers, Multimode fibers.

Transmission Characteristics of Optical Fibers: Attenuation, Absorption, Scattering losses, Bending loss, Dispersion: Intra modal dispersion, Inter modal dispersion, Polarization.

Optical Sources and Detectors: LEDs, LASER Diodes, Photo detectors, Photodiodes: Avalanche photodiodes and p-i-n photodiode, Response Time, Heterojunctions, Comparison of Photo Detectors.

Optical fiber connection: Introduction, Fiber alignment and joint loss, Fiber splices, Fiber connectors and couplers.

Optical amplifier: Introduction, Optical amplifiers, Basic applications and types, Semiconductor optical amplifiers, Erbium doped fiber amplifiers (EDFA).

Optical Sensor: Types and operation, Sensors using single mode fiber, Fiber optic gyroscopes, Chemical sensors, applications.

Optical Networks: Key network elements, Types, Synchronous optical network (SONET), WDM network, Wavelength routed networks, Optical CDMA.

Text Books:

1. J. M. Senior : Optical Fiber Communications.

Reference Books:

2. Palaise : Fiber Optic Communication.
3. Gerd Keiser : Optical Fiber Communication.
4. P Chakrabarti : Optical Fiber Communication.

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

ICE4112: Optical Fiber Communication Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

Optical fiber carries over 99% of global internet traffic, yet its real-world performance depends on accurate measurement of attenuation, bending losses, and numerical aperture. This lab course trains students to set up analog/digital fiber-optic links, characterize step-index vs. graded-index fibers, and evaluate modulation techniques (amplitude, frequency, PWM). It directly addresses the industry's need for engineers who can design and maintain high-bandwidth, long-distance networks amid explosive growth in cloud computing, FTTH, and 5G/6G fronthaul. By providing hands-on experience with fiber-optic trainer kits, this lab prepares graduates for telecommunications, data center operations, and optical component testing.

Course Objective

This lab introduces the simplex method of transmitting information from one place to another by sending pulses of light through an optical fiber. The lab covers analog and digital transceiver systems for fiber communication. It also analyze fiber optics characteristics, modulation and demodulation techniques using trainer kit.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Identify the establishment of analog-digital link, characteristics of fiber optic communication link and voice link using amplitude, frequency and PWM modulation with trainer kit. ICE4121: Machine Learning
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: ICE3241

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This is designed to provide a comprehensive understanding of how computers learn from data to make predictions and decisions. It covers fundamental theories, algorithms, and practical techniques such as supervised learning, clustering, dimensionality reduction, and decision trees. The course emphasizes real-world applications, enabling students to analyze complex data, build intelligent systems, and solve problems across different domains including classification, healthcare and artificial intelligence.

Course Objective:

The objective of this course is to provide students with the fundamental concepts of machine learning and its applications. This course covers both supervised and unsupervised learning techniques including Bayesian theory, dimensionality reduction, clustering, classification and decision tree.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain a wide variety of learning algorithms.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Explain a how to evaluate models generated from training data.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Apply the learning algorithms to real-world problems.	PO-2	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-4	Analyze supervised and unsupervised learning algorithms with examples.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Introduction to Machine Learning (ML): Definition, Aspects of developing a learning system: training data, target function, target function representation and function approximation; Issues of machine learning, Applications of ML in image recognition, Speech recognition, Traffic prediction, Email spam, Online fraud, Stock market trading, Medical diagnosis and language translation.

Supervised Learning: Introduction, Learning class from examples, Vapnik-Chervonenkis dimension, probably approximately correct learning, noise, learning multiple classes, regression, model selection and generalization, dimension of a supervised learning.

Bayesian Decision Algorithm: Introduction, Classification, Losses and risks, discriminant functions, association rules, Bayesian estimation of discrete and Gaussian

Dimensionality Reduction: Subset selection, Principle component analysis, Feature embedding, Factor analysis, Singular value decomposition and matrix factorization. Multidimensional scaling, linear discriminant analysis and canonical analysis.

Clustering: Introduction, Mixture densities, k-means clustering, Expectation-maximization algorithm, Mixtures of latent variable models, Supervised learning after clustering, Spectral clustering, Hierarchical clustering.

Nonparametric Method: Introduction, Nonparametric Density Estimation, Multivariate Data, Nonparametric classification, Condensed nearest neighbor, Distance-based classification, Outlier Detection, Nonparametric regression, Choosing smoothing parameters.

Decision Trees: Introduction, Univariate trees: Classification trees, Regression trees; Pruning, Rule extraction from trees, Learning rules from data, Multivariate trees.

Linear Discrimination: Generalizing the linear model, Geometry of the linear discriminant, Pairwise separation, Parametric discrimination, Gradient descent, Logistic discrimination, Discrimination by regression, Learning to rank

ICE4122: Machine Learning Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course provides students the knowledge and skills to design systems that learn from data and make intelligent decisions. It introduces fundamental concepts such as supervised and unsupervised learning and model evaluation. The course develops analytical and problem-solving abilities while enabling learners to apply ML techniques in real-world domains like healthcare, finance, and automation, preparing them for advanced research and industry related applications.

Course Objective:

This objective of this lab is to explore the basic programming concept and techniques of machine learning using python or suitable programming language with related libraries. This lab covers the implementation of different machine learning algorithms using different data sets to solve real-life problems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write and debug programs to solve different practical machine learning problems using python.	PO-5	Psychomotor Level 4 (Articulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)

ICE4131: Wireless Communication
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: ICE2211, ICE3141

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to provide a strong analytical and theoretical foundation in modern wireless communication systems by investigating theoretical knowledge with analytical skills. Through structured content such as statistical multipath channel analysis, OFDM systems, and digital modulation techniques, students develop the ability to apply core concepts of mathematics, signal processing, and communication theory to understand and describe complex wireless systems supporting engineering knowledge. This course emphasizes analytical thinking and problem-solving skills by enabling students to evaluate system performance under realistic conditions.

Course Objective

The objective of this course is to introduce the basic idea of wireless communication systems. This course covers statistical analysis of radio channels, multiuser systems and their capacities, multi-carrier systems, performance analysis of digital modulation techniques, diversity and equalization strategies, and spread spectrum systems.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Analyze the radio channel characteristics, and explain the different techniques of multiuser system and channel capacity.	PO-1, PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Explain the operational principle of multicarrier systems.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Analyze the performance of the digital modulation techniques, diversity, and equalization techniques.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Introduction: History, Wireless vision, Technical issues, Current wireless systems, Wireless spectrum, Standards.

Statistical Multipath Channel: Transmit and receive signal models, Time varying channel impulse response, Narrow band fading model, Wideband fading models, Discrete time model, Space-time channel model.

Multiuser Systems: Multiuser channels: The uplink and downlink, Multiple access: Frequency-Division Multiple Access (FDMA), Time-Division Multiple Access (TDMA), Code-Division Multiple Access (CDMA), Space-division, Hybrid techniques, Random access: Pure ALOHA, Slotted ALOHA, Carrier sense multiple access, Downlink (broadcast) channel capacity: Channel model, Capacity in AWGN, Uplink (multiple access) channel capacity: Capacity in AWGN.

Multi Carrier Modulation: Data transmission using multi carrier, MCM with overlapping sub channel, Sub carrier fading mitigation, cyclic prefix, OFDM, Matrix reorientation of OFDM, Challenges in MCM.

Digital Modulation Performance: SNR and bit/symbol energy, Error probability in AWGN channel for BPSK, QPSK, MPSK, MQAM, FSK, CPFSK and differential modulation; Alternate Q-function; Performance in fading channel, Outage probability, Average probability of error, Combined outage and average error probability, Doppler spread, ISI.

Diversity: Receiver diversity system model, Selection combining, Threshold combining, MRC, EGC, Transmit diversity, Alamouti scheme, Diversity analysis.

Equalization: Equalizer noise enhancement; Equalizer types; ISI free transmission; ZF and MMSE equalizer; MLSE, Decision feedback equalizer; Training and tracking for adaptive equalization.

Spread Spectrum: SS principle, DSSS system model, Spreading codes, System model, Spreading codes, Synchronization, RAKE receiver, FHSS, Spreading code for Multi-user DSSS, DL & UL channel, Multi-user detection, MC-CDMA, Multiuser FHSS.

ICE4132: Wireless Communication Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This *Lab* is designed to provide hands-on experience in modelling, simulation, and performance evaluation of wireless communication systems using modern computational tools such as MATLAB. Evaluating system performance contributes to investigation by fostering the ability to conduct experiments, analyze data, and interpret results in communication systems. This also reinforces PO-3 by enabling students to design and optimize systems under practical constraints.

Course Objective

The main objective of this lab is to develop a simulation environment for wireless communication using Matlab. This lab covers the evaluation of system performance under various communication channels, different coding and decoding techniques.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools

ICE4141: Digital Image Processing
75 Marks, 3 credits, 3 Hours/week, Lectures: 42, Exam. Time: 3 hours

Prerequisite: ICE2221

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

The Digital Image Processing course is justified as a 3-credit course due to its comprehensive coverage of fundamental theories, mathematical models, and practical techniques for image analysis. The syllabus spans approximately 45 contact hours, aligning with standard credit requirements. It progresses from image fundamentals to advanced topics such as enhancement, transformation, restoration, segmentation, and compression. The course develops analytical and problem-solving skills through both spatial and frequency domain methods. It reflects a complete image processing pipeline and supports real-world applications in areas like computer vision and medical imaging. The content aligns with Outcome-Based Education (OBE) principles and key engineering competencies, justifying its 3-credit status.

Course Objective

The objective of this course is to introduce the basic concepts of digital image processing including image representation, sampling and quantization, imaging geometry, image enhancement, and image transforms. The course also familiarizes students with advanced topics on image processing such as color models, degradation and restoration, filtering, segmentation and compression techniques.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Describe the fundamentals of digital image and its processing.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Analyze images in spatial and frequency domains using various transforms to enhance image quality.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Introduction to Digital Image Processing: Digital image processing, The Origins of Digital Image Processing, Examples of Fields that Use Digital Image Processing, Fundamental Steps of Digital Image Processing. Components of Image Processing System.

Digital Image Fundamentals: Elements of visual Perception, Image representation and modeling, Image sampling and quantization, Basic Relationships between Pixels, Linear and Nonlinear operators.

Image Enhancement in the Spatial Domain: Background, Basic gray level transformation, Histogram processing, Basics of spatial filtering, Smoothing and Sharpening Spatial filters.

Color Models: Properties of light, Intuitive color concepts, RGB color model, YIQ color model, CMY color model, HSV color model, Conversion between HSV and RGB models, Color selection and application.

Introduction to Image Transform: Basic properties of frequency domain and Fourier transform, Basic concepts of filtering in the frequency domain, Correspondence between filtering in the spatial and frequency domain, Smoothing and Sharpening Frequency-Domain filters, Walsh-Hadamard transform and other image transforms.

Image Restoration: Image observation models, noise models, Estimation of noise parameters, Restoration in the presence of noise, Periodic noise reduction by frequency domain filtering, Inverse and Wiener filtering.

Image Segmentation: Spatial feature extraction, Thresholding, Image segmentation, Edge detection, Boundary extraction and Region representation.

Image Compression: Data redundancy and compression ratio, Fidelity criteria, General model of Image compression, Huffman coding, Run-length coding, Basic principle of predictive technique, Feedback versus feed forward prediction, Transform coding.

ICE4142: Digital Image Processing Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

The Digital Image Processing Laboratory course is justified as it provides hands-on experience in implementing core image processing techniques introduced in theory. Through practical exercises, students work with real images to apply concepts such as enhancement, filtering, transformation, segmentation, and compression using programming tools (e.g., MATLAB/Python). The lab develops skills in algorithm implementation, visualization, and performance evaluation, strengthening analytical and problem-solving abilities. It bridges the gap between theory and real-world applications in areas like computer vision and medical imaging. The course promotes experiential learning, experimentation, and design thinking, aligning with OBE principles and supporting key outcomes such as problem analysis, tool usage, and solution development.

Course Objective

The objective of the lab is to introduce the fundamental operations of image processing. This lab also covers image enhancement in spatial and frequency domain.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write and debug computer programs to perform fundamental operations of image processing using MATLAB. ICE 4154: Research Project – Phase I
25 Marks, 1 Credits, 2 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to provide a comprehensive platform for students to integrate and apply their accumulated engineering knowledge to solve complex, real-world problems within an Outcome-Based Education (OBE) framework. It enables learners to conduct systematic literature reviews, formulate research problems, and develop innovative, sustainable solutions while considering societal, environmental, ethical, and safety impacts. The course further supports measurable outcomes by enhancing critical thinking, creativity, teamwork, and professional communication skills through technical reporting, presentations, and project-based activities.

Course Objective

The objectives of the research project are to:

- Prepare students to systematically review the existing literatures and to find possibly real-world engineering problems,
- Provide students with opportunity to apply and integrate their previously acquired engineering knowledge to formulate and find the solution of the problems,
- Enhance students' creativity in analyzing complex and the real-world engineering problems,
- Prepare students to understand the impact of engineering solutions to the society, health, safety, reliability, legal, cultural, and social aspects,
- Prepare students to understand the sustainability and impact of engineering solution towards environment,
- Develop communication skill among students through complex activities, technical report writing, oral presentations etc.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Specify a solvable complex engineering problem preferably relevant to the current and future industry	PO-2	Cognitive Level 4 (Create)	☐ Programming ☐ Experiment ☐ Open-ended Lab ☒ Demonstration ☐ Practice Lab	☐ Lab Performance ☐ Lab Test ☐ Lab Report ☐ Open-ended Lab Report ☒ Project(Presentation)

	through appropriate research methodology.

CO-4	Analyze the sustainability and impact of solution of the proposed project in terms of environmental consideration.	PO-6	Affective Level 5 (Internalize)	☐ Programming ☐ Experiment ☐ Open-ended Lab ☒ Demonstration ☐ Practice Lab	☐ Lab Performance ☐ Lab Test ☐ Lab Report ☐ Open-ended Lab Report ☒ Project(Presentation)
CO-5	Communicate effectively through writings, technical reports, deliverables, presentations and verbal communication as appropriate at various stages of project development.	PO-9	Affective Level 4 (Organize)	☐ Programming ☐ Experiment ☐ Open-ended Lab ☒ Demonstration ☐ Practice Lab	☐ Lab Performance ☐ Lab Test ☐ Lab Report ☐ Open-ended Lab Report ☒ Project(Presentation)

Teaching-Learning Strategies:

Teaching strategies for this course consist of project meetings with students as well as hands-on guidance sessions. The teaching-learning activities of the course comprises of two parts: Instructional part and technical demonstration part.

The Instructional Part includes the following activities:

- Concept of the research project, expected outcomes, assessment policy, project checklist etc.
- Introduction to engineering design process including formulation of problem, analysis of objectives, specifications and requirements, consideration of realistic constraints, engineering standards and impact of engineering solutions, design of solution, implementation, evaluation and validation of the solution
- Preparation of project proposal, estimation, project management and scheduling etc.
- Implication of engineering ethics and professional practices.
- Safety concern in engineering design.
- Contemporary issues and life-long learning
- Overview of project proposal writing and presentation techniques
- Guidelines for teamwork building

The Technical Demonstration part focuses the following activities:

- Literature review, technical reading and research process
- Identification and formulation of research project problem
- Analysis of objectives, requirements and specifications
- Project plan, proposal and management
- Documentation, project proposal writing, oral presentation etc.

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in the research project report and viva-voce. Final numeric reward will be the compilation of:

- **Research Project Proposal Report (60%)**
- **Presentation & Viva-Voce (40%)**

ICE4156: Industrial Training
25 Marks, 1 Credit

Prerequisite: None

Course Type: ☐ Theory ☒ Field Work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to provide students with real-world exposure to industrial environments by working alongside ICT professionals in companies or organizations within an Outcome-Based Education (OBE) framework. It enables learners to bridge the gap between theoretical knowledge and practical applications by understanding industrial workflows, technologies, and professional practices. The course further supports measurable outcomes by enhancing technical competencies, workplace readiness, professional ethics, and adaptability required for successful careers in the ICT and engineering industry.

Course Objective

The objective of this course is to provide students with practical experiences with the ICT professionals in companies or Industries.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Develop work habits and attitude required for ICT professionals.	PO-6, PO-7	Affective Level 2 (Respond)	☒ Field work	☒ Field work report
CO-2	Develop communication and technical report writing skills.	PO-9	Affective Level 3 (Value)	☒ Field work	☒ Field work report
CO-3	Develop soft skills to work independently as well as in a group in a professional environment.	PO-8, PO-10	Affective Level 4 (Organize)	☒ Field work	☒ Field work report

CO-4	Gain practical experiences on how ICT industries maintain environmental practices and work towards sustainable development.	PO-6, PO-11	Affective Level 5 (Internalized)	☒ Field work	☒ Field work report

Fourth Year, Second Semester

ICE4211: Computer Networks

75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

The course “*Computer Networks*” is designed to provide students with a strong foundation in core concepts of computer network. This course equips students with knowledge of different layers of OSI Model and TCP/IP Protocol Suite. It develops the ability to analyze switching techniques, routing algorithms, congestion control, and error handling mechanisms, which are critical for efficient and reliable communication. By covering modern networking technologies such as IP addressing, subnetting, routing protocols, and application services (e.g., DNS, HTTP, FTP), the course prepares students to understand real-world network infrastructures and internet operations.

Course Objective

The objective of this course is to provide a unified overview of data and computer communications. This course covers the details of different layers of the reference models for computer networking and data communication.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the basic concepts of data communications and computer networking.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation
CO-2	Describe the functions of different layers of Open System Interconnection (OSI) reference model.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation
CO-3	Describe the functions of different layers of TCP/IP reference model.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation

CO-4	Analyze protocols of different layers.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation
-------------	--	-------------	-----------------------------	---	--

Course Contents

Introduction: Introduction to Computer Networks, Network Architecture, Application of Computer Network, Protocols, Circuit Switching and Packet Switching Technique, Network Reference Model: Layer Task, the OSI Model, Layer in the OSI Model, TCP/IP Protocol.

Physical Layer: The Theoretical Basis for Data Communication, Guided Transmission Media and Unguided Transmission Media, Narrowband ISDN: Basic Concept, ISDN Standard, ISDN channel & Protocol Architecture and Broadband ISDN, ATM and Frame Relay.

Data Link Layer: Data Link Layer Design Issues, Error Detection and Correction, Elementary Data Link Protocols, Sliding Window Protocols, Protocol Specification and Verification, HDLC.

Medium Access Sublayer: Channel allocation problem, multiple access protocols, IEEE standards for LANs and MANs, Bridges, and High Speed LANs.

Network Layer Design: Network layer design issues, Routing algorithms, Network layer protocols, Routing protocols, Congestion control algorithms.

IP addresses: IP, IPv4, ICMP, IPv6, IP address classes, Subnet, VLSM, Routing protocols: OSPF and BGP.

Transport Layer: Process-to-process delivery, User Datagram Protocol (UDP), Transmission Control Protocol (TCP), Congestion control.

Application Layer: Client-Server Model, Domain Name System (DNS), Electronic mail (SMTP) and File Transfer (FTP), HTTP and WWW.

Text Books:

1. W. Stallings : Data and Computer Communications
2. A. S. Tanenbaum : Computer Networks

Reference Books:

1. B. Forouzan : Data Communication Networking

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

COs	Assessment Tools (Total 100%)

ICE4212: Computer Networks Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

The course “*Computer Networks Lab*” is designed to provide practical experience in designing, implementing, and analyzing computer networks using simulation tools such as Cisco Packet Tracer. It complements theoretical knowledge by allowing students to build and test different network topologies in a controlled virtual environment. This enhances their ability to analyze network performance, troubleshoot issues, and optimize configurations.

Course Objective:

The objective of this lab is to introduce the implementation of computer network using network simulator tools such as Cisco Packet Tracer. This lab includes design of different classes of computer networks, analysis of network structures with different protocols including TCP/IP and UDP.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools

ICE4221: Computer Architecture and Microprocessor

75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: ICE1121

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' understanding of the internal structure and operation of computer systems by integrating concepts of processor design, memory organization, control units, and microprocessors. It enables students to analyze and design digital systems at register and processor levels, understand instruction execution, and evaluate performance enhancement techniques such as pipelining and parallel processing. The course further supports measurable outcomes by equipping students with the ability to apply architectural concepts in designing efficient computing systems and embedded applications.

Course Objective

The objective of this course is to introduce the fundamental concepts of computer architecture. This course covers the evolution, organization and applications of microprocessor.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the basic design concepts of computer architecture.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation
CO-2	Describe the functions of ALU, control design and memory organization.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation
CO-3	Analyze the operation of the arithmetic unit including the algorithms & implementation of fixed-point and floating-point operation. CO-4	Explain the architecture and organization of 8086 microprocessor.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books	☒ Class test ☒ Final exam

				☐ Discussion	☒ Assignment
				☐ Audio/video	☒ Participation
				☐ Web material	☐ Presentation

Course Contents

Design Methodology: Introduction, Combinational circuits, Sequential circuits, the register level, Register-level components, Design method, the processor-level, Processor-level components, Design techniques.

Arithmetic Logic Unit: Fixed-point arithmetic, Addition, Subtraction, Multiplication and division, Processor Organization, Arithmetic Logic Unit, Design of Arithmetic Circuit, Design of Logic Circuit, Design of Arithmetic Logic Unit.

Control Design: Basic concepts of control unit, Hardwired control, GCD processor control unit, Multiplier control unit, CPU control unit, Micro-programmed control; Microinstruction.

Memory Organization: Memory devices and characteristics, RAM organization, Serial access memory; Virtual memory, Main-memory allocation, Segments and pages, High speed memories, Cache memory.

Microprocessors: Evolution of microprocessors, Microprocessor organization, microprocessor applications, 8086 microprocessors, Series of Intel and Pentium microprocessors.

Processor Basics: CPU organization, Information and number formats, Instruction set, Instruction format and instruction types, Addressing modes.

System Organization: Basic concepts, Bus control, Arbitration, Programmed I/O, DMA and interrupts, I/O processors, I/O interface circuit

Pipelining and Vector Processing: Parallel processing, Pipelining, Arithmetic pipelining, Instruction pipeline, Vector processing, Vector operations, Array processors.

Text Books:

1. John P. Hayes : Computer Architecture and Organization
2. Mohamed Rafiquzzaman : Microprocessors: Theory and Applications

Reference Books:

1. Barry B. Brey : Microprocessor Hardware Interfacing and Application
2. P. Pal Choudhury : Computer Organization and Design
3. M. Morris Manno : Computer System and Architecture

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

ICE4222: Computer Architecture and Microprocessor Lab

37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide hands-on experience in microprocessor programming, system interfacing, and architectural implementation. It enables students to work with microprocessor kits and simulation tools to develop programs, interface I/O devices, and analyze system performance. The lab further supports measurable outcomes by enhancing practical skills in low-level programming, hardware-software integration, debugging, and the development of real-world embedded and computing solutions.

Course Objective

The objective of this lab course is to introduce the assembly language programming with 8086 microprocessors. This lab course provides the students with hands-on experience on interfacing of different peripherals to microprocessor.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write assembly language programs to solve practical problems and interfacing of different peripherals using 8086 microprocessor trainer kit. ICE4231: Information Theory and Coding

75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: STAT1211, ICE3221

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' understanding of the fundamental principles of information representation, transmission, and compression. It enables students to analyze concepts such as entropy, mutual information, source coding, and channel capacity, and apply coding theorems to evaluate reliable communication over noisy channels. The course further supports measurable outcomes by equipping students with the analytical and theoretical tools required to design efficient data compression and error-control coding schemes for modern communication systems.

Course Objective

The objective of this course is to introduce the fundamental principles of information theory. This course covers measuring information in terms of probability and other statistical approaches and channel capacity with or without noise. It also discusses the basic concepts of source coding and data compression techniques.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the fundamental concepts of information theory including probability, entropy and their inter-relationships.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Analyze and compute entropy and mutual information of channel and information sources.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Explain different source and channel coding theorems.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

	techniques.			☐ Discussion ☐ Audio/video ☐ Web material	☒ Assignment ☐ Participation ☐ Presentation
--	-------------	--	--	--	---

Course Contents

Entropy: Entropy; Joint entropy and conditional entropy; Relative entropy and mutual information; Relationship between entropy and mutual information; Chain rules for entropy; Relative entropy.

Mutual Information and Inequality: mutual information; Jensen's inequality and its consequences; Log sum inequality and its applications; Data-processing inequality; Sufficient statistics; Fano's inequality.

Asymptotic Equipartition Property: Asymptotic Equipartition property theorem; Consequences of the AEP: Data compression; High-probability sets and the typical set.

Entropy Rates of a Stochastic Process: Markov chains; Entropy rate; Entropy rate of a random walk on a weighted graph; Functions of Markov chains.

Source Coding: Source code, nonsingular code, uniquely decodable code, prefix code, Kraft Inequality theorem, Extended Kraft Inequality theorem, Kraft inequality for uniquely decodable codes; Optimal codes; Bounds on the optimal code length.

Data Compression: McMillan's theorem; Huffman codes; Shannon–Fano–Elias coding; Universal codes and channel capacity, Run-length coding; Arithmetic coding, Higher-order modeling, The Lempel-Ziv algorithm.

Channel Capacity: Noiseless binary channel; Noisy channel with no overlapping outputs; Binary symmetric channel; Binary erasure channel; Symmetric channels; Properties of channel capacity; Preview of the channel coding theorem; Jointly typical sequences.

Channel Coding Theorem: Zero-error codes; Fano's inequality and the converse to the coding theorem; Equality in the converse to the channel coding theorem; Hamming codes; Feedback capacity; Source–channel separation theorem.

Text Books:

1. TM Cover, JA Thomas : Elements of Information Theory

Reference Books:

2. Roberto Togneri and Christopher J.S. deSilva : Fundamentals of Information Theory and Coding Design

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

ICE4241: Cryptography and Network Security

75 Marks, 3 credits, 3 Hours/week, Lectures: 42, Exam. Time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' understanding of the principles and techniques required to secure data and communication systems. It enables students to analyze and apply cryptographic algorithms, including symmetric and asymmetric encryption, hashing, digital signatures, and key management schemes to ensure confidentiality, integrity, and authentication. The course further supports measurable outcomes by equipping students with the ability to evaluate security protocols and design robust solutions for modern networks, cloud environments, and wireless systems.

Course Objective

The objective of this course is to provide an introduction and overview of information security. This course will also cover broad spectrum of various types of security incidents and attacks, and learn methods to prevent, detect and react incidents and attacks. Students will also learn basics of application of cryptography which are one of the key technology to implement security functions.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain Cryptography, Network Security and its principles.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☐ Assignment ☐ Participation ☐ Presentation
CO-2	Analyze different Cryptography algorithms to protect confidentiality, authenticity and completeness of data.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☒ Discussion ☐ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☒ Presentation
CO-3	Explain an overview of security threats and countermeasures for networks.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☒ Presentation

CO4	Summarize the key functional components of Internet mail architecture.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☐ Assignment ☐ Participation ☐ Presentation
------------	--	-------------	-----------------------------	--	--

Course Contents

Background: Computer security concept, a model for network security, modular arithmetic, prime number, Euclid's algorithm, Fermat's and Euler's theorem, testing for primality, finite fields.

Symmetric Ciphers: Symmetric cipher model, Substitution and transposition techniques, Data Encryption Standard, Block cipher principles, Feistel structure for block cipher, Data Encryption Standard (DES), Avalanche effect, Advanced Encryption Standard (AES), AES Structure, Round Function, key expansion, cipher and avalanche effect, Block Cipher Modes of Operation (ECB, CBC, CFB, OFB, CTR).

Asymmetric Ciphers: Principles of public-key cryptosystems, applications for public-key cryptosystems, requirements for public-key cryptosystems, public-key cryptanalysis; the RSA algorithm, description of the algorithm, computational aspects, and the security of RSA.

Data Integrity Algorithms: Application of Cryptographic Hash Functions, Two simple hash function, Requirements and security, Secure Hash Algorithm (SHA); Message Authentication Codes (MAC) requirements, functions and HMAC; Digital signatures properties, attacks and requirements, Digital signature scheme, Digital signature algorithm.

Mutual Trust: Symmetric key distribution using symmetric encryption and asymmetric encryption, distribution of public keys, public key infrastructure, X.509 Certificates, *Diffie-Hellman Key exchange*: The algorithm, key exchange protocols, Man-in-the-middle attack; ECC, key exchange using ECC, Key certificate: Digital Signature of Public key, Public key Infrastructure (PKI) and Certificate Authority, Exercise on PKI.

Network Access Control and Cloud Security: Elements of a Network Access Control System, Network Access Enforcement Methods, Extensible Authentication Protocol, Cloud Computing Elements, Cloud Computing Reference Architecture, Cloud Security Risks and Countermeasures, Data Protection in the Cloud.

Wireless Network Security: Wireless network threats, Wireless network measures, Mobile devices security threats, Mobile device security strategy, IEEE 802.11 Wireless LAN Overview, IEEE 802.11i Wireless Lan security.

Electronic Mail Security: Email components, protocols, formats, and threats. S/MIME, Pretty Good Privacy, DNSSEC, DNS-based Authentication of named entities, Sender Policies Framework, Domain-based Message Authentication, reporting, and conformance.

Text Books:

1. William Stallings : Cryptography and Network Security, 7th Editions

ICE4242: Cryptography and Network Security Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide hands-on experience in implementing cryptographic algorithms and network security mechanisms using practical tools and programming environments. It enables students to perform experiments on encryption/decryption, hashing, digital signatures, key exchange protocols, and network security configurations. The lab further supports measurable outcomes by enhancing practical skills in securing communication systems, analyzing vulnerabilities, and applying security solutions to real-world scenarios.

Course Objective

The objective of this lab is to provide basic concept of private and public key cryptosystem. This course also provides different cryptographic and key sharing algorithms for secure data communication.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools

ICE4251: Robotics and Automation

75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' competence in designing, analyzing, and controlling robotic and automation systems by integrating principles of kinematics, dynamics, sensing, and control. It enables students to apply advanced concepts such as robot modeling, embedded systems, machine learning, and human-robot interaction to solve real-world industrial and autonomous system challenges. The course further supports measurable outcomes by equipping students with interdisciplinary skills for innovation, system integration, and intelligent automation in modern engineering applications.

Course Objective

The objective of this course is to introduce the concepts of robotic system and its components, instrumentation and control of robotics. The course also provides the AI and machine learning approaches used in robot for human-robot interaction.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the fundamentals of robotics and its components.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☒ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation
CO-2	Design robotic system using the kinematics and dynamics of robotics.	PO-3	Cognitive Level 4 (Create)	☒ Lecture notes ☒ Text books ☐ Discussion ☒ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation

	techniques in robotics for human-robot interaction.		(Apply)	☐ Discussion ☒ Audio/video ☒ Web material	☒ Assignment ☒ Participation ☐ Presentation
--	---	--	---------	--	--

Course Contents

Introduction to Robotics: Types and components of a robot, Classification of robots, Kinematics systems; Definition of mechanisms and manipulators, Degrees of Freedom.

Robot Kinematics and Dynamics: Kinematic modeling: Translation and Rotation Representation, Coordinate transformation, DH parameters, Forward and inverse kinematics, Jacobian, Singularity, and Statics Dynamic Modeling: Forward and inverse dynamics, Equations of motion using Euler-Lagrange formulation, Newton Euler formulation.

Sensors: Contact and Proximity, Position, Velocity, Force, Tactile, Introduction to Cameras, Camera calibration, Geometry of Image formation, Euclidean /Affine /Projective transformations, Vision applications in robotics.

Robot Actuation Systems: Actuators: Electric, Hydraulic and Pneumatic, Transmission: Gears, Timing Belts and Bearings, Parameters for selection of actuators.

Robotics Control: Transformation of Coordinates, Jacobians, Modeling Control, Control laws: P, PD, PID, Linear and Non-linear controls, Basics of control: open loop-closed loop, Transfer functions, Motion and path planning, Collision avoidance and navigation.

Control Hardware and Interfacing: Embedded systems: Microcontroller Architecture and integration with sensors, actuators, components, Programming Applications for Industrial robot - programming in – VAL II.

AI and Machine Learning for Robotics: Introduction to Machine Learning Theory Applications, Decision tree modeling, logical reasoning, Probability theory and Bayesian methods, Classification methods and clustering techniques, Bio-inspired artificial intelligence algorithms, Reinforcement learning.

Human-Robot Interaction: Introduction to Human-Robot Interaction, Human-Robot Interactive Systems, Natural User Interface, Natural Language User Interface, Safe Human-Robot Interaction, Robot programming for collaborative tasks.

Text Books:

1. Saeed. B. Niku : Introduction to Robotics: Analysis, Systems, Applications
2. Roland Siegwart, Illah Reza Nourbakhsh : Introduction to Autonomous Mobile Robots

Reference Books:

3. J. J Craig : Introduction to Robotics: Mechanics and Control
4. K.S. Fu, R.C. Gonzalez and C.S.G. Lee : Robotics: Control, Sensing, Vision and Intelligence

Assessment and Evaluation Strategy:

Students will be assessed on basis of their overall performance in the final examination, class tests/assignments/quizzes, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final examination (70%)**

COs	Assessment Tools (Total 100%)			
	20%		10%	70%

ICE4252: Robotics and Automation Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide hands-on experience in robotics and automation by allowing students to implement concepts of kinematics, control systems, sensing, and embedded programming. It enables students to design, program, and test robotic systems using sensors, actuators, and industrial tools, while applying techniques such as motion planning, control algorithms, and basic machine learning. The course further supports measurable outcomes by fostering practical problem-solving skills, teamwork, and the ability to develop and evaluate real-world robotic and automation solutions.

Course Objective

The objective of this lab is to perform different types of transformations used for controlling the robotic system. This lab also includes controlling the robot movement, and using AI and machine learning algorithms for decision making by robot.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write and debug programs to perform different types of transformations using ROS environment.	PO-1, PO-5	Psychomotor Level 4 (Articulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)
CO-2	Design and manipulate different component of a robotic system.	PO-3	Cognitive Level 4 (Create)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)
CO-3	Apply AI and machine learning algorithm for making decision by the robot.	PO-2	Cognitive Level 3 (Apply)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)
CO-4	Write individual and group report by	PO-8	Affective Level 4	☐ Programming	☒ Lab Performance

	solving open-ended problems.		(Organize)	☐ Experiment ☒ Open-ended Lab ☐ Demonstration ☒ Practice Lab	☒ Lab Test ☐ Lab Report ☒ Open-ended Lab Report ☐ Project(Presentation)
--	------------------------------	--	------------	---	--

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, lab tests, assignments, class participation, quizzes and viva voice. Final numeric reward will be the compilation of:

- **Continuous assessment** (lab test, assignments, open-ended lab report, quizzes, viva) (30%)
- **Class participation** (10%)
- **Final exam** (60%)

COs	Assessment Tools (Total 100%)

ICE4261: Internet of Things
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course provides comprehensive knowledge of Internet of Things (IoT) systems, focusing on architectures, communication protocols, embedded devices, and real-world applications in smart environments such as homes, cities, and industries. It introduces key concepts including IoT design, modeling, and platform development, enabling students to understand the integration of physical and digital systems. The course develops students' ability to design and implement IoT solutions by applying communication technologies (e.g., MQTT, CoAP), embedded systems (e.g., Arduino and Raspberry Pi), and network models. It also equips students with practical skills in programming, device interfacing, and data-driven system development for smart and connected applications.

Course Objective

The objective of this course is to provide the basic concepts of the interconnection between of the physical world and the cyber space. This course includes IoT network, protocol and security of IoT systems. This course also covers Arduino and Raspberry Pi programming for IoT.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Explain the basic concepts of IoT.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☒ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation
CO-2	Recognize the building blocks and communication protocols of IoT.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☒ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation
CO-3	Design and program IoT devices using modern	PO-3, PO-5	Cognitive Level 4	☒ Lecture notes ☒ Text books	☒ Class test ☒ Final exam

	tools.		(Create)	☐ Discussion ☒ Audio/video ☒ Web material	☒ Assignment ☒ Participation ☐ Presentation
CO-4	Explain the security and safety issues of IoT.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☒ Audio/video ☒ Web material	☒ Class test ☒ Final exam ☒ Assignment ☒ Participation ☐ Presentation

Course Contents

Introduction and Applications: Key features, Technological trends of IoT, Design and modeling IoT systems, Smart and connected products and operation, Application of IoT in Smart homes, Smart cities, Smart manufacturing and automotive domains, etc.

IoT Architecture and Platform: Components of IoT architecture, IoT Service as a Platform, IoT Security and Interoperability, IoT system management. IoT platforms design methodology.

IoT Communication Protocols: HTTP, UPnp, LoRa, CoAP, MQTT, XMPP.

Industrial IoT (IIoT): Industry 4.0, IIoT architecture, Basic technologies, IIoT research and development, Research challenges and applications of IIoT.

IoT Devices: Sensors, Wearable devices, Embedded system and its components, Introduction to Arduino and Raspberry pi, Interactions of embedded systems with the physical world.

Arduino and Raspberry Pi Programming: Introduction, IDE, Exploring the programming languages (C/C++) syntax, Coding, Compiling, and uploading to the microcontroller for sensing and controlling devices, Working with communication modules such as Bluetooth and WiFi.

IoT Network Models and Events Analysis: Events, Networks, Devices and hubs, Single and multi-hub networks, Network models, Event populations, Stochastic event populations, Environmental interaction model, Event transport and migration.

Security and Safety: System security, Network security, Generic application security, Application process security, Run-time monitoring, ARMET approach, Privacy and dependability.

Text Books:

1. Dimitrios Serpanos and Marilyn Wolf : Internet-of-Things (IoT) Systems Architectures, Algorithms, Methodologies

2. Joe Biron and Jonathan Follett : Foundational Elements of an IoT Solution
The Edge, The Cloud, and Application Development

Reference Books:

3. Mansaf Alam, Kashish Ara Shakil and Samiya Khan
Editors : Internet of Things (IoT)
Concepts and Applications

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes (20%)**
- **Class participation (10%)**
- **Final exam (70%)**

ICE4262: Internet of Things Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course provides hands-on experience in developing Internet of Things (IoT) applications using embedded platforms such as Arduino and Raspberry Pi. It reinforces theoretical concepts by enabling students to interface sensors and actuators with microcontrollers for real-time data acquisition and device control. The course develops practical skills in programming, hardware interfacing, and system integration, allowing students to read sensor data and control IoT devices through efficient coding and communication techniques. It also enhances understanding of how embedded systems interact with the physical environment in smart applications.

Course Objective

The objective of this lab is to explore the basic Arduino and Raspberry Pi Programming. The lab includes the programming to read data from sensor and control different IoT devices.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write and debug programs to solve different practical problems with IDE.	PO-5	Psychomotor Level 4 (Articulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)

ICE4271: Information Security
75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: None

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course provides the essential theoretical and technical framework required by the students to protect digital assets against an increasingly complex landscape of cyber threats and social engineering. By mastering both the mathematical foundations of cryptography and practical risk management, students learn to design secure systems that uphold the core principles of confidentiality, integrity, and availability.

Course Objective

The objective of this course is to provide an overview of information security. This course also covers various types of security incidents and attacks, and methods to prevent, detect and countermeasures against security incidents and attacks.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Describe the fundamental concepts of information security, services, and mechanism.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Explain various Information security threat and controls for it.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-3	Analyze a security incidents and design countermeasures.	PO-2	Cognitive Level 4 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

CO-4	Apply the common key cryptography and public key cryptography to protect confidentiality, authenticity and completeness of data.	PO-2	Cognitive Level 3 (Apply)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
-------------	--	-------------	---------------------------	---	---

Course Contents

Introduction of Information Security: Definition, examples of information security incidents, Information Security management, The concept of information security (confidentiality, Integrity, Availability), Basic terminologies of Information Security, Human Aspects of Information Security, Social Engineering.

Information Security for Server Systems and Client devices: Attacks to Server Systems connected to the Internet and Counter measures, Attacks to Web Servers and counter measures, Denial of Services Attacks, Attacks to Network Systems, Attacks to Personal Computers and smart phones, and counter measures, intrusion of malicious software, Stolen and lost devices.

Information Security Risk Management Exercise: Identify Information Assets, Identify Security Risk and evaluation, Risk Treatment, Presentation of exercise result, Information Security Governance, Information security management system (ISMS), Information Security Policy, Standards and Procedures, Information Security Evaluation.

Security Incident Response: What is Security Incident response, Computer Security Incident response team, Incident response exercise.

Information Security and Cryptography: Requirement for Secure Communication, a model for network security, classic cryptography, modern cryptography, *Number theory*: Modular arithmetic, Euclid's algorithm, Finite fields, Polynomial arithmetic, prime number, Fermat's and Euler's theorem, Testing for primality, The Chinese Remainder theorem, Discrete logarithms.

Private and Public Key Cryptography: Common key cryptography algorithms: DES, Triple DES, AES, Encryption modes, exercise on common key cryptography, public key cryptography, Applications for public-key cryptosystems, Requirements for public-key cryptography, the RSA algorithm, Elliptic Curve Cryptography (ECC), Exercise of public key cryptography.

Data Integrity and Digital Signature: Integrity of Data, Hash Function, *Cryptographic Hash Functions*: two simple hash function, applications, requirements and security, SHA; *Message Authentication Codes (MAC)*: requirements, functions, HMAC; *Digital Signatures*: Digital signature, Digital signature standard, Mutual authentication, One-way authentication, Digital signature standard.

Mutual Trust: Symmetric key distribution using symmetric encryption and asymmetric encryption, distribution of public keys, public key infrastructure, X.509 Certificates, *Diffie-Hellman Key exchange*: The algorithm, key exchange protocols, Man-in-the-middle attack; key exchange using ECC, Key certificate: Digital Signature of Public key, Public key Infrastructure (PKI) and Certificate Authority, Exercise on PKI.

Text Books:

1. Michael E. Whitman and H. Mattord : Principles of Information Security
2. William Stallings : Cryptography and Network Security

Reference Books:

3. Christof Paa and Jan Pelzl : Understanding Cryptography: A Textbook for Students and Practitioners

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in all the exams, class tests, assignments, assigned topics based presentations, and class participation. Final numeric reward will be the compilation of:

- **Four class tests/Assignments/Quizzes** (20%)
- **Class participation** (10%)
- **Final exam** (70%)

COs	Assessment Tools (Total 100%)

CO2	√		√	√
CO3	√	√	√	√
CO4	√	√	√	√

ICE4272: Information Security Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This lab provides an environment to practically apply cryptographic algorithms and defense mechanisms, transforming mathematical theories into functional security tools. By simulating real-world attacks, students learn to identify vulnerabilities and implement effective countermeasures across server and client systems. The lab also emphasizes the administrative side of security through hands-on risk assessment exercises using digital certificates. Ultimately, this practical experience builds the technical proficiency needed to ensure data integrity and confidentiality in modern, high-threat digital landscapes.

Course Objective:

The objective of this lab is to provide an introduction to the broad field of computer, network, and information security. This course covers cryptographic algorithms and protocols for achieving network security.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write programs to demonstrate the concepts related to applied cryptography, including plain-text, cipher-text.	PO-5	Psychomotor Level 4 (Articulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)
CO-2	Apply the algorithms of symmetric cryptography, asymmetric cryptography, and digital signatures	PO-1	Cognitive Level 3 (Apply)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report

	for information security and authentication.				☐ Project(Presentation)
CO-3	Analyze the security mechanism of different cryptographic algorithms.	PO-2	Cognitive Level 4 (Analyze)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)
CO-4	Analyze the common network vulnerabilities and attacks, defense mechanisms and cryptographic protection mechanisms.	PO-2	Cognitive Level 4 (Analyze)	☐ Programming ☐ Experiment ☒ Open-ended Lab ☐ Demonstration ☒ Practice Lab	☐ Lab Performance ☐ Lab Test ☐ Lab Report ☒ Open-ended Lab Report ☐ Project(Presentation)

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in the final exam, lab tests, assignments, class participation, quizzes and viva voce. Final numeric reward will be the compilation of:

- **Class participation (10%)**
- **Continuous assessment (lab test, assignments, quiz, viva-voce) (30%)**
- **Final exam (60%)**

COs	Assessment tools (Total 100%)			
	30%		10%	60%
	Lab test/ Quiz/ Viva 1 & 2	Open-ended lab report/ viva	Class participation	Final exam

ICE4281: Web Engineering

75 Marks, 3 Credits, 3 Hours/week, Lectures: 42, Exam time: 3 hours

Prerequisite: ICE3251

Course Type: ☒ Theory ☐ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to develop students' ability to systematically design, develop, and manage modern web applications by integrating principles of requirements engineering, architecture, modeling, and testing. It enables learners to apply client-side and server-side technologies to build scalable, secure, and user-centric web systems while addressing real-world constraints. The course further supports measurable outcomes by equipping students with skills in web application design, quality assurance, and project management essential for professional software development environments.

Course Objective

The objective of this course is to address the basic concept associated with web application development. It includes requirements analysis, architecture, modeling, design and testing of web application. The course also provides technologies for web application development and web project management.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Describe engineering concept of developing web applications and programming concepts used in web application development.	PO-1	Cognitive Level 1 (Remember)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-2	Explain web application programs with HTML, CSS, and JavaScript used in both client and server side.	PO-1	Cognitive Level 2 (Understand)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

CO-3	Analyze programs with respect to their performance, correctness, possible output and errors.	PO-2	Cognitive Level 3 (Analyze)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation
CO-4	Apply knowledge and understanding to solve interactive web application problems and projects under specific requirements.	PO-10	Affective Level 3 (Value)	☒ Lecture notes ☒ Text books ☐ Discussion ☐ Audio/video ☐ Web material	☒ Class test ☒ Final exam ☒ Assignment ☐ Participation ☐ Presentation

Course Contents

Introduction to Web Engineering: Web Applications, Characteristics of Web Applications, Product-related Characteristics, Usage related Characteristics, Development-related Characteristic, Web Engineering Concepts, Evolution of web engineering.

Requirements Engineering for Web Applications: Requirements Engineering (RE) Activities, RE Specification in Web Engineering, Principles for RE of Web Applications, Adapting RE Methods to Web Application Development, Requirement Types, Notations, Tools.

Technologies for Web Applications: Client-side Technologies, ActiveX Controls, Document-specific Technologies, Hypertext Markup Language (HTML), DHTML, Synchronized Multimedia Integration Language (SMIL), eXtensible Markup Language (XML), XML Stylesheet Language, Java Script, Server-side Technologies, Servlet, URI Handlers, Web Service, Middleware Technologies.

Web Application Architectures: Components of a Generic Web Application Architecture, Layered Architectures, 2-Layer Architectures, N- Layer Architectures Data-aspect Architectures, Database-centric Architectures, Architectures for Web Document Management, Architectures for Multimedia Data.

Modeling Web Applications: Modeling Requirements, Hypertext Modeling, Hypertext Structure Modeling Concepts, Access Modeling Concepts, Relation to Content Modeling, Presentation Modeling, Relation to Hypertext Modeling, Customization Modeling.

Web Application Design: Information Design, Software Design, Merging Information Design and Software Design, Problems and Restrictions in Integrated Web Design, Presentation Design, Interaction Design, Navigation Design, Designing a Link Representation, Designing Link Internals, Navigation and Orientation, Structured Dialog for Complex Activities, Interplay with Technology and Architecture, Functional Design.

Testing Web Applications: Testing terminology, Quality Characteristics, Test Objectives, Test Levels, Role of the Tester, Test Approaches: Conventional Approaches, Agile Approaches, Test Scheme, Test Dimensions, Applying the Scheme to Web Applications, Test Methods and Techniques, Link Testing, Browser Testing, Usability Testing, Load, Stress, and Continuous Testing, Testing Security, Test-driven Development, Test Automation, Benefits and Drawbacks of Automated Test, Test Tools.

Web Project Management: Understanding Scope, Refining Framework Activities, Building a Web E-Team, Managing Risk, Developing a Schedule, Managing Quality, Managing Change, Tracking the Project.

ICE4282: Web Engineering Lab
37.5 Marks, 1.5 Credits, 3 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This laboratory course is designed to provide hands-on experience in developing and testing web applications using contemporary tools and technologies. It enables students to implement front-end and back-end solutions, design interactive interfaces, and perform testing for usability, performance, and security. The lab further supports measurable outcomes by enhancing practical development skills, teamwork, and the ability to deploy and manage real-world web-based systems.

Course Objective

The objective of this lab is to develop web application programs using HTML, CSS, and Java Script. The lab also intended to design, implementation and testing the principles of Web-based applications using the Web engineering concepts.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Write web application programs with HTML, CSS, JavaScript to solve problems.	PO-5	Psychomotor Level 4 (Articulate)	☒ Programming ☒ Experiment ☐ Open-ended Lab ☒ Demonstration ☒ Practice Lab	☒ Lab Performance ☒ Lab Test ☒ Lab Report ☐ Open-ended Lab Report ☐ Project(Presentation)

ICE 4254: Research Project – Phase II
75 Marks, 3 Credits, 6 Hours/week

Prerequisite: None

Course Type: ☐ Theory ☒ Laboratory work ☐ Project work ☐ Viva Voce

Course Rationale:

This course is designed to provide a comprehensive platform for students to integrate and apply their accumulated engineering knowledge to solve complex, real-world problems within an Outcome-Based Education (OBE) framework. It enables learners to conduct systematic literature reviews, formulate research problems, and develop innovative, sustainable solutions while considering societal, environmental, ethical, and safety impacts. The course further supports measurable outcomes by enhancing critical thinking, creativity, teamwork, and professional communication skills through technical reporting, presentations, and project-based activities.

Course Objective

The objectives of the research project are to:

- Prepare students to systematically review the existing literatures and to find possibly real-world engineering problems,
- Provide students with opportunity to apply and integrate their previously acquired engineering knowledge to formulate and find the solution of engineering problems,
- Enhance students' creativity in analyzing and solving complex and possibly real-world engineering problems,
- Train students with skills on systematic design and development process and documentation to the solution of engineering project,
- Prepare students to develop and enhance self-learning ability,
- Aware students regarding professional practices, norms and ethical responsibilities in regards to designing engineering solution,
- Prepare students to understand and evaluate the impact of engineering solutions to the society, health, safety, reliability, legal, cultural, and social aspects,
- Prepare students to understand and evaluate the sustainability and impact of engineering solution towards environment,
- Create an environment to promote team approach in engineering problem solving,
- Develop communication skill among students through complex activities, technical report writing, oral presentations etc.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Delivery methods and activities	Assessment tools
CO-1	Specify a solvable complex engineering problem preferably relevant to the current and future industry through appropriate research methodology.	PO-2	Cognitive Level 4 (Create)	☐ Programming ☐ Experiment ☐ Open-ended Lab ☒ Demonstration ☐ Practice Lab	☐ Lab Performance ☐ Lab Test ☐ Lab Report ☐ Open-ended Lab Report ☒ Project(Presentation)

Teaching-Learning Strategies:

Teaching strategies for this course consist of project meetings with students as well as hands-on guidance sessions. The teaching-learning activities of the course comprises of two parts: Instructional part and technical demonstration part.

The Instructional Part includes the following activities:

- Concept of the research project, expected outcomes, assessment policy, project checklist etc.
- Introduction to engineering design process including formulation of problem, analysis of objectives, specifications and requirements, consideration of realistic constraints, engineering standards and impact of engineering solutions, design of solution, implementation, evaluation and validation of the solution
- Preparation of project report, estimation, project management and scheduling etc.
- Implication of engineering ethics and professional practices.
- Safety concern in engineering design.
- Contemporary issues and life-long learning
- Overview of project report writing and presentation techniques
- Guidelines for teamwork building

The Technical Demonstration part focuses the following activities:

- Literature review, technical reading and research process
- Identification and formulation of research project problem
- Analysis of objectives, requirements and specifications
- Project plan, project development and management
- Documentation, project report writing, oral presentation etc.

Assessment and Evaluation Strategy:

Student will be assessed on basis of their overall performance in the research project report and viva-voce. Final numeric reward will be the compilation of:

- **Research Project Report (60%)**
- **Presentation & Viva-Voce (40%)**

COs	Assessment tools (Total 100%)		
	30%	30%	40%
	Internal examination	External examination	Presentation & Viva-Voce

ICE4210: Viva-Voce
50 Marks, 2 Credits

Prerequisite:

Course Type: ☐ Theory ☐ Laboratory work ☐ Project work ☒ Viva Voce

Course Rationale:

This course is designed to assess students' comprehensive understanding of their academic program through oral examination. It enables learners to articulate theoretical knowledge, justify problem-solving approaches, and demonstrate the integration of concepts across multiple disciplines. The course further supports measurable outcomes by enhancing communication skills, critical thinking, and the ability to respond confidently and effectively to professional and technical inquiries.

Course Objective

The objective of the course is to enable students to express verbally their knowledge gained from the theory and lab courses of Fourth Year in an effective and clear manner.

Course Outcomes (COs), Program Outcomes (POs) and Assessment:

CO No.	CO Statement	Corresponding PO	Domain/ level of learning taxonomy	Assessment tools
CO-1	Communicate and express verbally the knowledge obtained in an effective and clear manner.	PO-9	Affective Level 2 (Respond)	☒ Viva Voce
